Complications in Phacoemulsification

Avoidance, Recognition, and Management

von
William J. Fishkind

1. Auflage

Thieme 2001

Verlag C.H. Beck im Internet:
www.beck.de
ISBN 978 3 13 124681 3
Acute intraoperative suprachoroidal hemorrhage (AISH), 67–73
choroidal vascular fragility, 68–69, 69
etiology, 67, 67
expulsive hemorrhage, 72–73
incidence, 69
intraoperative diagnosis, 70
management, 70–72, 71–72
pressure differential, 67–68
prevalence and occurrence, 68
prevention, 69
risk factors, 69
Admission note, complication prevention and damage control, 257
Akinesia, injectible ophthalmic anesthesia complications, 9
Aminoglycosides, endophthalmitis vitrectomy study (EVS), 216
Anterior capsular fibrosis, intraocular lens implantation, 145, 146
Anterior capsular optic capture, continuous curvilinear capsulorrhexis, 44
Anterior capsular tears
choo choo chop and flip technique, 92, 93
continuous curvilinear capsulorrhexis, 42, 43
cortical (intumescent) mature cataract, 111–112
phaco chop complication, 95–96, 95–96
phaco flip, 103
posterior capsular tears, 250–251, 251
stop and chop phaco, 88–89
Anterior capsule, “nonstop” phaco chop and location of, 274, 276
Anterior chamber
depth of, horizontal chopping criteria, 278
internal incision proximity, 32–33
intraocular lens
implantation, decentration complications, 148–149
properties of, 155
phacodynamic complications, fluid-induced collapse, 194–195
posterior capsular tears, nuclear fragments in, 132
shallow-chamber hypotony, 238–239
secondary causes, 240–241
trabeceulotomy complications, 227
Antibiotics, endophthalmitis vitrectomy study (EVS), 215
Anticoagulants, injectible ophthalmic anesthesia and continuation of, 2
Aphakic iris-supported IOP implantation, 146–147, 147
Aphakic patients, intraocular lens implantation, 155
Aqueous misdirection syndrome, shallow-chamber hypotony, 240–241
Arcus, phacoemulsification, 169
Aspiration line obstruction, phacodynamic complications, 196–197
Asteroid hyalosis, posterior capsular tears, 124–125, 125
Astigmatic keratotomy, phacoemulsification, 176–177
Astigmatism, transscleral posterior chamber ocular lens selection, 156–157
Atkinson retrobulbar block, gobal needle penetration, 217–218, 218
Atonic pupil, 10
Autologous blood injection, conjunctival leak, 239
Axial length
phaco flip contraindications, 103
silicone oil vitreous replacement, 142
B
Band keratopathy, phacoemulsification, 169
Bechert nucleus rotator, phaco flip technique, 101, 102
Beehler dilator, iris stretch, 51, 51
Bell’s phenomenon, topical anesthesia contraindication, 260
Biconvex lenses, silicone oil vitreous replacement, 141
Bimanual limbal anterior vitrectomy, posterior capsular tear management, 129–130, 266
Binkhorst “iris-clip” IOL, implantation, 146
Blebitis, nonpenetrating trabecular surgery, 234–244
Bleeding, nonpenetrating trabecular surgery (NPTS), 235–236
Blepharitis, preoperative treatment of, 255
Blepharospasm, topical anesthesia contraindication, 260
Bowman’s membrane, anatomy, 166
Brainstem injection, injectible ophthalmic anesthesia, 9
Bullous keratopathy
Capsulorrhexis
Capsule, anatomy, 123
BSS replacement material
Fuchs’ corneal dystrophy, 171
IOL selection criteria, 142
vitrectomy, refractive index, 140
Capsular tension rings
endothelial damage, 180
phaco chop, 168
C
“Can-opener” capsulotomy technique, cortical (intumescent) mature cataract, 112
Capsular bag
anatomy, 56, 57
hydrosteps complications, cortex-capsular separation, 58–59, 60
intraocular lens implantation complications, 149, 150, 152–153, 153
stop and chop phaco, hydrodissection and nucleus elevation, 86, 87
Capsular block syndrome, hydrosteps complication, 59–60, 61
Capsular tears
nonpenetrating trabecular surgery (NPTS), 236
vitreous loss, 134–135
Capsular tension rings
continuous curvilinear capsulorrhexis complications, 44–45, 45
IOL replacement, 152–153, 153
zonular compromise, 119–121, 119–121, 270
Capsule, anatomy, 123
Capsulorrhexis
clear corneal phaco surgery, 262
mature cataracts, 268–269
zonular dialysis, 269
cortical (intumescent) mature cataract, 109–112
Fuchs’ corneal dystrophy, 171
horizontal vs. vertical chopping and, 278–279
“nonstop” phaco chop complications, 275
posterior capsular tears, 126
posterior polar cataract, 108
pupil stretching, 53
stop and chop phaco, 85
zonule-compromised surgery, 117–118, 118
Capsulotomy noncontiguous, phacoemulsification, 79
Capsulotomy size, phacoemulsification, 81
Cataractogenesis, categories, 75–77, 76
Cataract size, continuous curvilinear capsulorrhexis and, 38, 40
Cavitational energy, choo choo chop and flip technique, 93
Certified registered nurse anesthestists (CRNAs), 2
Chemical mycotoxicity, injectible ophthalmic anesthesia complications, 9
Choo choo chop and flip
anterior capsular tears, 92, 93
cortex mobilization, 93
incomplete chops, 92–93
phaco energy application, 93
segment mobilization, 93
technique, 90–91, 91–92
Chop techniques, nuclear mature (brunescent) cataracts, 113–114
Choroidal vascular fragility, 68–69, 69
Chronic glaucoma, posterior segment lens retention, 205
Chu foldable lens cutter, transscleral posterior chamber intraocular lens (TS PCL) implantation, 161
Cionni ring model, zonular compromise, 121, 121–122
Clear corneal phaco surgery complications, 265–270
broken posterior capsule, advanced vitrectomy, 265–267, 267
mature cataract, 267–269, 269
zonular dialysis, 269–270
incision inaccuracies, 32
routine procedures, 260–265
anesthetic timing and agent, 261
capsulorrhexis, 262
exposure and instrumentation, 261–262
foldable IOL insertion, 264–265
hydrosteps, 262–263
incision techniques, 262
irrigation and aspiration, 264
noninjection anesthesia selection, 260–261
patient sensation, 261
phacoemulsification, 263–264, 264
topical anesthesia, 260
wound closure, 265
sutureless cataract surgery, 29–30, 29–31
Coaxial alignment, guidelines for, 257
Coaxial infusion, vitrectomy with, 135–136
Compartment syndrome, injectible ophthalmic anesthesia complications, 9
Conjunctival ballooning, topical anesthesia, 20
Conjunctival buttonhole, nonpenetrating trabecular surgery (NPTS), 227, 229
Conjunctival hydration, wound construction and closure complication, 33–34
Conjunctival leak, nonpenetrating trabecular surgery (NPTS), 239
Constant-state intraocular pressure, infusion/aspiration balance, 134, 134
Continuous-tear curvilinear capsulorrhexis (CCC) cataract size and type, 38, 40
complications
anterior capsular IOL optic capture, 44, 45
anterior capsular tears, 42, 43
intraocular lens selection, 42–43, 43
noncontinuous capsulorrhexis, 42
peripheral tear extension, 37–38
posterior capsule tears, 43
posterior capsulorrhexis, 43–44, 44
postoperative complications, 46, 46–47
research background, 36
YAG capsulotomy, 46–47
zonular dialysis, 44–46, 45
zonae abnormalities, 41
intraocular lens optic size, 40–41
intumescent cataract, 41–42
phaco chop complications, anterior capsular tears, 95–96
small-pupil cases, 38
surgical technique, 37, 38–40
Copeland “Maltese cross” IOL, 146
Cornea
anatomy, 166–167, 167
astigmatic keratotomy, 176–177
Descemet’s membrane complications, 171–176
epithelial protection, 177
Fuch’s dystrophy, cataract surgery, 169–171
limbus anatomy, 167
phaco-induced endothelial damage, 179–181
toxic anterior segment syndrome, 177–179
visualization difficulties, 167–169
arcus, 169
banded keratopathy, 169
bullous keratopathy, 168
epithelial irregularities, 168–169
stromal scarring, 168
surface irregularities, 168
Corneal endothelium, phaco chop damage, 99
Corneal exposure, injectible ophthalmic anesthesia, 10
Corneal incision
phaco flip, 100–101
stop and chop phaco, 85
Corneal tunnel incision, anatomic classification and location, 31
Cortex mobilization
choo choo chop and flip technique, 93
phacoemulsification, 251–254, 252
Cortex removal, posterior capsular tears, 131
Cortical cleaving hydrodissection
soft cataracts, 106
techniques, 57, 57–58
zonule-compromised surgery, 117–118
Cortical (intumescent) mature cataract
management, 109–112, 110–112
removal, 269
Cortical viscodissection, zonule-compromised surgery, 118
Corydon cannula, stop and chop phaco, hydrodissection, 86
Coumadin, nonpenetrating trabecular surgery (NPTS) complications, 223
Cyanoacrylate tissue glue, conjunctival leak, 239
Cyclodialysis, nonpenetrating trabecular surgery, 241
Cyclooxygenase inhibitors (COX-2), nonpenetrating trabecular surgery (NPTS) complications, 223–224
Cystic macular edema (CME), continuous curvilinear capsulorrhexis, posterior capsular tears, 43
D
Debulking techniques, mature cataracts, 268–269
Decentration
intraocular lens, 148–149
posterior segment complications, 207–213
transscleral posterior chamber intraocular lens (TS PCL) implantation, 163
Deep scleral flap, nonpenetrating trabecular surgery (NPTS), 234–235
Deep sclerectomy procedure
glaucoma management, 225–226, 228–229
nonpenetrating trabecular surgery (NPTS), 234–235
thin dep scleral flap, 235
Delayed-onset endophthalmitis, 216, 216
Dense cataracts, stop and chop phaco, 87–88
Descemet’s detachment
nonpenetrating trabecular surgery (NPTS), 236–237
phacoemulsification, 174–176, 177
wound construction inaccuracy, 32, 34
Descemet’s membrane
anatomy, 166
Fuchs’ corneal dystrophy, 169–170
incision location, 31
phacoemulsification, complications, 171–173, 171–174
Descemet’s window
nonpenetrating trabecular surgery failure, 242–243
NPTS-superficial scleral flap, 234
perforation, 235
nonpenetrating trabecular surgery (NPTS), 235
viscocanalostomy procedure, 226
Diplopia, injectible ophthalmic anesthesia complications, 9
Dispersive/cohesive viscoelastics
background, 182–183, 183
soft shell technique, 186–189, 187
Dropped nucleus, vitreous loss and, 139
E
Ectopic injection, injectible ophthalmic anesthesia, 3
Endonucleus, choo choo chop and flip technique, 90–91
Endophthalmitis
delayed-onset endophthalmitis, 216, 216
nonpenetrating trabecular surgery, 234–244
posterior segment complications, 212–213
clinical diagnosis and microbiological confirmation, 213, 213
endophthalmitis vitrectomy study (EVS), 214–215, 214–216
incidence, 213
transscleral posterior chamber intraocular lens (TS PCL) implantation, 162, 162
Endophthalmitis vitrectomy study (EVS), posterior segment complications, 214–216, 215–216
Endothelium
anatomy, 166
Fuchs’ corneal dystrophy, 170–171
phaco-induced damage, 179–181
transscleral posterior chamber ocular lens selection, 156–157
Epinephrine, injectible ophthalmic anesthesia, ocular blood flow compression, 9–10
Epinucleus
lack of, vertical chop indication, 279
phacodynamic complications, vacuum management, 198–199, 199
stop and chop phaco, removal, 89
Epithelial dystrophy, phacoemulsification, 168–169
Epithelial edema, Fuch’s corneal dystrophy, 170
Epithelium
anatomy, 166, 166
irregularity, 168–169
protection during phaco procedures, 177
Exchange techniques, intraocular lens
posterior segment complications, 208–212, 209–211
Exchange techniques, intraocular lens (continued)
  transscleral posterior chamber intraocular lens (TS PCL), 159, 161

Explantation techniques, transscleral posterior chamber intraocular lens (TS PCL) implantation, 159, 160

Expulsive hemorrhage, acute intraoperative suprachoroidal hemorrhage (AISH), 72, 72–73

Extracapsular cataract extraction (ECCE)
  continuous curvilinear capsulorrhexis complications, 46
  posterior capsular tears, 126
  Sheets’ glide, 127–128, 127–128
  posterior segment lens retention, 206

Extraocular muscle paresis, injectible ophthalmic anesthesia complications, 9

Eyedrops, nonpenetrating trabecular surgery (NPTS) complications, 224

Eyelids, positive pressure complications, 63–64

Eyelid squeezing, topical anesthesia, 19–20

Eye movement, topical anesthesia, 18, 18–19

F

Facial nerve block, injectible ophthalmic anesthesia, 10

Fiber tissue glue, conjunctival leak, 239

Fine/Nagahara chopper, choo choo chop and flip, 90–91

Flow management, phacodynamic complications, 195–196

Flow pump, phacodynamic complications, 195

Fluid dynamics
  phacodynamic complications
    flow management, 195–196
    ultrasound management, 200–202
    vacuum management, 199–200
    positive pressure complications, 64

Fluid misdirection syndromes
  hydrosteps complication, 60, 61
  positive pressure complications, 64–67, 65–66
  environmental conditions, 65
  etiology, 64–65
  treatment, 65–67, 66

Foldable intraocular lens, 28
  clear corneal phaco surgery insertion, 264–265
  flipping or removal techniques, 265
  loop-haptic lenses, implantation techniques, 148
  materials and positioning, 140–141
  operative complications, 145
  removal techniques, 151–152, 153

Force-puncture continuous-tear curvilinear capsulorrhexis (CCC), 37, 38

Fuchs’ corneal dystrophy
  endothelial damage, 179–181
  phacoemulsification complications, 169–171
  phaco flip contraindications, 103

Fuchs’ endothelial dystrophy
  Healon5 techniques, 191
  phacoemulsification, 179–181
  soft shell dispersive-cohesive viscoelastic technique, 188

Full-thickness procedures, glaucoma management, 225

G

Gas vitrectomy replacement, IOL power calculations, 142

General anesthesia, ocular anesthesia vs., 25

Gimbel-modified Kraff-Utrata forces, continuous-tear curvilinear capsulorrhexis (CCC), 37, 38

Glaucoma
  phacotrabeculectomy complications
    blebitis and endophthalmitis, 243–244
    bleeding complications, 235–236
    broken capsule, vitreous loss, 236
  cycloidalysis, 241
  deep scleral flap, 234–235
  deep spherectomy procedure, 225–226
  Descemet’s detachment, 236–237
  failure complications, 241–243
  intraoperative complications, 227–229, 228
  iris prolapse, 232–234
  management procedures, 225
  miotic and topical eyedrop usage, 224
  postoperative complications, 237–240
  predisposing conditions, 224–225
  preoperative assessment, 223–224
  scleral flap problems, 229, 232
  shallow or flat anterior chamber, 240–241
  symptomatic filtering blebs, 243
  trabeculectomy procedure, 226–227
  viscocanalostomy procedure, 226, 230–231
  posterior segment lens retention, 205

Global fixation, clear corneal phaco surgery, 261–262

Global perforation
  injectible ophthalmic anesthesia, 4–6
  posterior segment complications, 217–218, 218

Global torsion, posterior capsular tears, 121

Glycosaminoglycoside (GAG) chains, vitreous body, 133

Goniocopy, transscleral posterior chamber ocular lens selection, 157

Guttata
  Fuchs’ corneal dystrophy, phacoemulsification procedures, 169–171
  preoperative assessment, 255

Guttataless Fuchs’ corneal dystrophy
  phacoemulsification, 170
  toxic anterior segment syndrome (TASS), 178

H

Haptic lenses
  operative complications, 145
  properties of, 140–141
  repositioning techniques, 210–211, 210–211
  scleral suture fixation, 210–211, 211
  transscleral posterior chamber intraocular lens (TS PCL) implantation
    distal posterior chamber intraocular lens (TS PCL) implantation
      distal haptic preparation, 157–158, 158
      proximal haptic preparation, 158, 159
  Hard lens, phacoemulsification and, 81–82

Healon5, 189–192
  biomechanical properties, 189–191, 190–191
  removal, 191–192, 192
  research background, 182
  Schlemm’s canal trabecular meshwork rupture, 237
  surgical applications, 191, 192

Healon GV, Schlemm’s canal trabecular meshwork rupture, 237

Heminenuclear chop, nuclear mature (brunescent) cataracts, 114, 114–115

Higher viscosity-cohesive viscoelastics, properties, 184–185

Honan balloon, zonule-compromised surgery, 117
Intraocular lens (IOL) (continued)  
- zonule compromise, selection and insertion, 119  
- Intraocular pressure (IOP)  
  - acute intraoperative suprachoroidal hemorrhage (AISH), 67–68  
  - shallow anterior chamber hypotony, 238–239  
- Intraoperative monitoring  
  - acute intraoperative suprachoroidal hemorrhage (AISH), 70, 70  
  - ocular anesthesia, 25  
- Intravenous (IV) sedation, injectible ophthalmic anesthesia, 3  
- Iris prolapse, management of, 54  
- Intumescent cataract  
  - corticofugal manipulations, 50  
- Irrigation fluid pooling, posterior capsular tears, 124  
- Ischemia, injectible ophthalmic anesthesia, ocular blood flow compression, 9–10  

K  
- Kuglen hook technique  
  - iris stretch, 49–50, 50  
  - posterior capsular tears, Sheets’ glide, 127–128, 128  

L  
- Laryngeal mask anesthesia, topical anesthesia adjunct, 17, 17  
- Lateral postcubital, phacoemulsification complications, 197, 198  
- Lens, consistency, phacoemulsification and, 80–81  
- Lens capsule, anatomy, 36–37, 37  
- Lens dislocation  
  - anatomic and etiologic factors, 116, 117  
  - transscleral posterior chamber intraocular lens (TS PCL) implantation, 163  

Lenses. See Nuclear fragments  
- Lens Opacities Classification System (LOCS), preoperative cataract assessment, 255–256, 256  
- Lens tilt, transscleral posterior chamber intraocular lens (TS PCL) implantation, 162–163  
- Lidocaine, Rosenthal deep topical, fornix-based “nerve block” anesthesia (RTDNBA), 15–16  
- Limbal extraction, posterior segment lens retention, 205–206, 206  
- Limbal side-port incisions, “nonstop” phaco chop complications, 276  
- Limbus  
  - anatomic relationships, 167  
  - parallel sutures, iris problems, 55  
  - wound closure and construction, 31  
- Loop haptic intraocular lenses  
  - implantation techniques, 147–148  
  - complications, 149, 149–151  
  - operative complications, 145  
  - replacement, 153  
- Lower-viscosity dispersive viscoelastics, properties, 185, 188–186  
- Lysis of synechiae, small pupil conditions, 49–50, 50  

M  
- Manual dissection, stop and chop phaco, 86–87, 87  
- Massive vitreous retractor (MVR) blade  
  - primary transscleral posterior chamber intraocular lens (TS PCL) implantation, 162  
- Vitrectomy, posterior capsular tear management, 266–267  
- Mature cataract  
  - complications, 112  
    - clear corneal phaco surgery, 267–269  
    - cortical (intumescent) cataracts, 109–112, 110–112  
    - management, research background, 109  
    - “nonstop” phaco chop complications, 273  
    - nuclear (brunescent) cataract, 112–113, 113  
    - phaco flip contraindications, 102–103  
    - surgical management, 113–115  
- Medial block injection, injectible ophthalmic anesthesia, 4, 4  
- Memory settings, phacoemulsification techniques, 256–257  
- Microfinger techniques, “nonstop” phaco chop, 271, 272  
- Micro-iris retractors  
  - iris stretch, 52, 52
Nagahara phaco chop
clear corneal phaco surgery, 263
technique and rationale, 271, 272–273
training guidelines, 276–277
Nd:YAG capsulotomy
continuous curvilinear capsulorrhexis, 46–47
cortical (intumescent) mature cataract, 112
Near-clear corneal incision, sutureless cataract surgery, 29, 30
Needle-tap technique, posterior segment endophthalmitis, 213
Noncontinuous capsulorrhexis
continuous curvilinear capsulorrhexis complication, 42
hydrostasis complication, 60–61, 61
Noninjection anesthesia. See Topical anesthesia
Nonpenetrating trabecular surgery (NPTS) complications
blebitis and endophthalmitis, 243–244
bleeding complications, 235–236
broken capsule, vitreous loss, 236
cyclodialysis, 241
deep scleral flap, 234–235
deep spherectomy procedure, 225–226
Descemet’s detachment, 236–237
failure complications, 241–243
intraoperative complications, 227–229, 228
iris prolapse, 232–234
management procedures, 225
miotic and topical eyedrop usage, 224
NPTS-superficial scleral flap, 234
postoperative complications, 237–240
conjunctival leak, 239
hyphema, 237–238
hypotonic maculopathy, 240
shallow anterior chamber-hypotony, 238–239
suprachoroidal effusion, 240
predisposing conditions, 224–225
preoperative assessment, 223–224
scleral flap problems, 229, 232
shallow or flat anterior chamber, 240–241
symptomatic filtering blebs, 243
thin deep scleral flap, 235
trabeculectomy procedure, 226–227
viscocanalostomy procedure, 226, 230–231
Nonsteroidal antiinflammatory drugs (NSAIDs), nonpenetrating trabecular surgery (NPTS) complications, 223–224
“Nonstop” phaco chop, technique and rationale, 271, 272–273
Nuclear emulsification
cortical (intumescent) mature cataract, 111–112
nuclear mature (brunescent) cataract, 113–114
posterior capsular tears, 126
zone-compromised surgery, 118
Nuclear fragments
phacodynamic complications, 201–202, 202
posterior segment retention, 204–205
clinical features, 205
management guidelines, 206–207, 207
surgical indications, 205
surgical techniques, 205–206, 206
vitrectomy outcomes, 206
posterior capsular tears
anterior chamber penetration, 132
vitreous cavity penetration, 131
Nuclear mature (brunescent) cataract, management, 112–113, 113
Nucleus
“nonstop” phaco chop complications, equator locations, 274, 275–276
phaco flip technique, 101
posterior capsular tear and stabilization of, 258–259, 258–259
stop and chop phaco
density, 87–88
elevation, 86, 87
Occlusion, phacodynamic complications, 196, 197
Ocular anesthesia, systemic complications
general anesthesia vs. orbital block, 25
intraoperative monitoring and treatment, 25
preoperative evaluation, 24–25
prevalence and classification, 26
Ocular blood flow, injectible ophthalmic anesthesia and limitation of, 9–10
Ocular compression device, injectible ophthalmic anesthesia, 5, 9–10
Ocular penetration, injectible ophthalmic anesthesia, 4–6
Ocular perforation, injectible ophthalmic anesthesia, 4–7
Oculocardiac reflex, injectible ophthalmic anesthesia, 10
Olive-tipped cannula, phaco tilt and tumble, 101–102, 102
“One-stitch” closure technique, 28
Ophthalmic viscosurgical devices (OVDs)
classification, 183–184, 183–184
content, molecular weight, and zero-shear viscosity, 183
dispersive/cohesive elastics
background, 182–183, 183
soft shell technique, 186–189, 187
Healon5, 189–192
biomechanical properties, 189–191, 190–191
removal, 191–192, 192
surgical applications, 191, 192
higher viscosity-cohesive viscoelastics, 184–185
lower-viscosity dispersive elastics, 185–186
pseudoplasticity, 183, 184
research background, 182
general anesthesia vs. orbital block, 25
surgical indications, 205
surgical techniques, 205–206, 206
vitrectomy outcomes, 206
surgical applications, 185, 185
Optic nerve sheath injection, injectible ophthalmic anesthesia, 9
Ostia, Schlemm’s canal, nonpenetrating trabecular surgery, 237
Phacoemulsification

Phaco chop
anterior capsul visualization, 274, 276
bubonic keratopathy, 168
capsulorrhexis, posterior capsule integrity, and hydrodissection complications, 275
chopper positioning, 274–275, 275
crigger tip elevation, 276
clear corneal phaco surgery, 263, 264
complications, 95–99
anterior capsule, 95–96, 95–96
corneal endothelial/iris damage, 99
posterior capsule rupture, 98, 98–99
zonular dialysis, 96–97, 96–98
high-risk conditions
loose zonules, 273, 275
mature cataracts, 273
small pupils, 272–273
high-risk patients, 272–275
horizontal vs. vertical chopping, 278–279
karate chop alternative, 94–95
limbal sidee-port incision compression, 276
mechanism, 94
memory settings, 256–257
Nagahara technique, 263, 271, 272–273, 276–277
“nonstop” technique, rationale, 271, 272–273
nuclei removal, 276
nucleus equator location, 274, 275–276
quick chop technique, 263, 277, 277–278
tip centralization and superficiality, 275, 276
Phacodynamic complications
fluidic complications
flow management, 195–196
vacuum management, 197–200
occlusion, 196, 197
postocclusion surge, 196–197, 198
preocclusion surge, 196, 197
pump types, 195
research background, 194–195
ultrasonic complications, 200–202
Phacoemulsification

acute intraoperative suprachoroidal hemorrhage (AISH), 69–70
astigmatic keratotomy complications, 176–177
capsulotomy noncontiguous, 79
cataractogenesis, 75–77, 76
clear corneal phaco surgery, 263, 264
zonular dialysis, 269
complications, 77
corneal complications, 167–169
arcus, 169
banded keratopathy, 169
corneal endothelial damage, 168–169
epithelial irregularities, 168–169
stromal scarring, 168
surface irregularities, 168
cortex mobilization, 251–254, 252
endothelial damage, 179–181
epithelial protection, 177
Fuchs’ corneal dystrophy, 169–171
historical background, 79
incision size, 249–250
 incomplete hydrodissection, 79, 80
lens consistency, 80–81
patient selection and screening, 248–249, 249
positive pressure complications, 65
posterior capsular tears
continuation following, 126–127
Sheets’ glide, 128–129, 128–129
posterior plate/separating quadrants, 83
pupil stretching, 54
quadrant mobilization and emulsification/removal, 84
tip/handpiece configuration, 249
toxic anterior segment syndrome (TASS), 177–179
Phaco flip
complications, 103–104
contraindications, 102–103
techniques, 100–101, 101
Phaco needle bevel, phacodynamic complications, vacuum management, 199–200, 200
Phaco tilt and tumble
complications, 103, 103–104
contraindications, 102–103
techniques, 101–102, 102
Phacotrabeculectomy
 glaucoma management, 225, 227
intraoperative complications, 227–237
conjunctival buttonhole, 237, 239
iris prolapse, 232–234
scleral flap complications, 239, 242
postoperative complications, 237–240
Phakic intraocular lens, implantation techniques, 146–147
Photophobia, topical anesthesia, 19–20
Phototoxicity, topical anesthesia, 19–20
Pinpoint (Fukasaku) anesthesia, 16
Plate-haptic lenses
implantation techniques, 147–148
operative complications, 145, 146, 150–151
removal techniques, 152
Platelet aggregation inhibitors, nonpenetrating trabecular surgery (NPTS) complications, 223–224
INDEX • 289

Plavix, nonpenetrating trabecular surgery (NPTS) complications, 223–224
Positive posterior pressure, continuous-tear curvilinear capsulorrhexis (CCC), 37–38, 39
Positive pressure complications
  acute intraoperative suprachoroidal hemorrhage (AISH), 67–73
  choroidal vascular fragility, 68–69, 69
epithelial, 67, 67
  expulsive hemorrhage, 72–73
  incidence, 69
  intraoperative diagnosis, 70
  management, 70–72, 71–72
  pressure differential, 67–68
  prevalence and occurrence, 68
  prevention, 69
  classification, 63
  fluid misdirection syndrome, 64–67, 65–66
  mechanical/external causes, 63–64
Positive posterior pressure, continuous-tear curvilinear capsulorrhexis (CCC), 37–38, 39
Positive pressure complications
  acute intraoperative suprachoroidal hemorrhage (AISH), 67–73
  choroidal vascular fragility, 68–69, 69
epithelial, 67, 67
  expulsive hemorrhage, 72–73
  incidence, 69
  intraoperative diagnosis, 70
  management, 70–72, 71–72
  pressure differential, 67–68
  prevalence and occurrence, 68
  prevention, 69
  classification, 63
  fluid misdirection syndrome, 64–67, 65–66
  mechanical/external causes, 63–64
Positive posterior pressure, continuous-tear curvilinear capsulorrhexis (CCC), 37–38, 39
Positive pressure complications
  acute intraoperative suprachoroidal hemorrhage (AISH), 67–73
  choroidal vascular fragility, 68–69, 69
epithelial, 67, 67
  expulsive hemorrhage, 72–73
  incidence, 69
  intraoperative diagnosis, 70
  management, 70–72, 71–72
  pressure differential, 67–68
  prevalence and occurrence, 68
  prevention, 69
  classification, 63
  fluid misdirection syndrome, 64–67, 65–66
  mechanical/external causes, 63–64
Posterior assisted levitation, posterior capsular tears, 130–131
Posterior capsular fibrosis/haze, continuous curvilinear capsulorrhexis, 46–47
Posterior capsular tears
  anatomy, 123
  anterior capsular tears and, 250–251, 251
  assisted levitation, 130–131
  bimanual limbal anterior vitrectomy, 129–130, 130
  continuous curvilinear capsulorrhexis, 43–44, 44
  cortex removal, 131
  ECCE conversion, 126
epithelial, 125
  extracapsular extraction, Sheets’ glide, 127, 127–128
  hydrosteps complication, 61–62
  management of, 265–267, 267
  “nonstop” phaco chop complications, 275
  nuclear emulsification, 126
  phaco chop complications, 98–99
  phacoemulsification, 126–127
    Sheets’ glide, 128–129, 129–130
  predisposing factors, 124–125, 125
  pseudo-posterior capsule, 127
  rupture signs, 123–124, 124
  salvaging techniques, 258–259, 258–259
  soft shell dispersive-cohesive viscoelastic technique, 188
  surgical management, 125–126
  vitreous loss, 135, 135
  vitreous nuclear loss, 131–132
Posterior capsulorrhexis, continuous curvilinear capsulorrhexis complications, 43–44, 44
  optic capture, 45
Posterior chamber intraocular lens (PCL)
  decenteration complications, 149, 149
implantation techniques, 147
properties of, 155
transscleral fixation, 155–156
  anatomic considerations, 156
  complications, 162–163
  lens selection criteria, 156–157
primary implantation, 162
secondary implantation, 157–161
transscleral fixation, patient selection and preoperative evaluation, 156
Posterior plate/separating quadrants, phacoemulsification sculpting, 83
Posterior polar cataract, 105–106, 106
surgical technique, 107–108
Posterior segment complications
  delayed-onset endophthalmitis, 216, 216
  endophthalmitis vitrectomy study, 214–216
  global penetration, 217–218, 218
  intraocular lens dislocation, 207–213
    clinical characteristics, 207–208
    endophthalmitis, 212–213
    management guidelines, 208–212, 209–211
    postoperative complications, 211–212
surgical outcomes, 211
research background, 204
retained lens fragments, 204–205
  clinical features, 205
  management guidelines, 206–207, 207
  surgical indications, 205
  surgical techniques, 205–206, 206
vitrectomy outcomes, 206
suprachoroidal effusion/hemorrhage, 217
Posterior subcapsular cataract, histopathology, 107
Postocclusion surge, phacoemulsification complications, 196–197, 197–198
Preoperative assessment
  complication prevention and damage control, 255–257
cortical (intumescent) mature cataract, 110
glaucoma procedure complications, 223–224
injectable ophthalmic anesthesia, 1–2
ocular anesthesia, 24–25
small pupil conditions, 49
transscleral posterior chamber ocular lens, 156–157
Pressure differential, acute intraoperative suprachoroidal hemorrhage (AISH), 67–68
Pseudoxefoliation
  lens dislocation, 116
  posterior capsular tears, 131
Pseudoplasticity
  Healon5, 189–191, 190–191
  viscoelastics, 183–184, 184
Pseudo-pigmentary posterior capsule, posterior capsular tears, 127
Pump characteristics, phacoemulsification complications, 195
obstructions, 196
Pupil circlage, iris problems, 0
Pupillary block, shallow-chamber hypotony, 240–241
Pupil ovalization, phakic lens implantation, 146, 146
Pupil size
  capsulorrhexis technique, 38, 40, 53
    pupil stretch, 53
cataract surgery and management of, 49
epithelial, 49
  hydrosteps technique, 53–54
  iris stretch techniques, 50–52, 51
    Beehler dilator, 51, 51
    micro-iris retractors, 52, 52
  lysis of synechiae, 49–50, 50
multiple sphincterotomies, 52
“nonstop” phaco chop complications, 272–273
phaco chop, horizontal vs. vertical chopping and, 278
phacoemulsification, 81
phaco flip complications, 103

**Q**

Q Quadrant mobilization, phacoemulsification sculpting | 84
“Quick chop” technique | 290
clear corneal phaco surgery | 263
guidelines for | 277–278

**R**

R Regional anesthesia, positive pressure complications | 64
Releasable suture techniques, trabeculotomy procedure | 227, 232–233
Removal techniques | 290
Healon5, 191–192
intraocular lens, 150–152, 151
posterior segment complications | 208–212, 209–211
Replacement techniques, IOL | 290
intraoperative techniques | 152
postoperative techniques | 152, 152–153
Repositioning techniques, intraocular lens | 150, 150
posterior segment complications | 209–210, 209–211
Retinal detachment (RD) | 290
continuous curvilinear capsulorhexis, posterior capsular tears | 43
posterior segment complications | 212, 212
posterior segment lens retention | 206–207, 207
Retrobulbar hemorrhage, injectible ophthalmic anesthesia | 8
Retrobulbar injection, injectible ophthalmic anesthesia | 4, 5
Rhexis size, phaco flip complications | 103
“Rock ‘n’ roll” removal, Healon5, 192, 192
Rosenthal deep topical, fornix-based “nerve block” anesthesia (RTDNBA) | 15–16, 16
eye lid squeezing, photophobia, and phototoxicity | 19–20

**S**

S Schlemm’s canal/trabecular meshwork
nonpenetrating trabecular surgery | 237
rupture | 237
Scleral suture fixation
intraocular lens repositioning | 209–210
IOL repositioning | 210–211
Scleral tunnel incision, mature cataracts | 267–269
Sclerectomy, scleral flap problems | 233–234
Sclerocorneal frown incision | 29, 30, 31
inaccuracies | 32
Sclerocorneal incision, sutureless cataract surgery | 28–29, 30
Sclerokeratectomy, deep sclerectomy procedure | 226
Sculpting techniques, phacoemulsification | 81–83, 82
Sector iridectomies, suture/sutureless techniques | 52–53
Sedation procedures
injectible ophthalmic anesthesia | 3
topical anesthesia | 17
Segment mobilization, choo choo chop and flip technique | 93
Sharp needle technique, injectible ophthalmic anesthesia | 3–4,
Sulfur hexafluoride gas (SF6), Descemet’s detachment management, 175
Suprachoroidal effusion/hemorrhage
nonpenetrating trabecular surgery (NPTS), 240
posterior segment complications, 217
Sutureless cataract surgery
clear corneal incision, 29–30, 29–31
intraocular lens repositioning, 209
sclerocorneal incision, 28–29
Suturing techniques
posterior segment complications, 211–212
releasable trabeculotomy procedure, 227, 232–233
transscleral posterior chamber intraocular lens (TS PCL) implantation, 159, 161
Symptomatic filtering blebs, nonpenetrating trabecular surgery, 243
Systemic disease, injectable ophthalmic anesthesia complications, 2
retrobulbar hemorrhage, 8
Systemic sedation, topical anesthesia, 17

T
Tamponade technique, positive pressure complications, 65–66, 66
Temporal incision
clear corneal phaco surgery, 261
as standard procedure, 257, 258
Tetracaine, toxicity, 20
Ticlid, nonpenetrating trabecular surgery (NPTS) complications, 223–224
Topical anesthesia
clear corneal phaco surgery advantages, 260
patient sensation, 261
selection criteria, 260–261
timing and agent, 261
conjunctival ballooning, 21
eyelid squeezing, photophobia, and phototoxicity, 20–21
eye movement, 19
complications, 20, 20
virtual reality device, 18, 18–19
intraoperative experience, 17–18
laryngeal mask anesthesia as adjunct, 17, 17
noninjection techniques, 14–16
intracamer al technique, 15
topical drop, 14–15
operating room environment, 18
patient selection, 17
pinpoint (Fukasaku) anesthesia, 16
preoperative assessment, 16–17
prevalence of techniques, 15
Rosenthal deep topical, fornix-based “nerve block” anesthesia (RTDNBA), 15–16, 16
subtenon’s (parabulbar) anesthesia, 16
systemic sedation, 17
topical gels, 16
toxicity, 21–22
Toxic anterior segment syndrome (TASS)
endothelial damage, 180
phacoemulsification, 177–179
Toxicity, topical anesthesia, 20–21, 21
Trabeculotomy
bleeding complications, 236
failure of, 241–242, 242–243
glaucoma management, 226–227
iris prolapse, 232–234
postoperative complications, hyphema, 237–238
scleral flap problems, 229, 232, 233
Transscleral posterior chamber intraocular lens (TS PCL) complications, 162, 162–163
decentration, 162
dislocation, 162
lens tilt, 162
vitreous hemorrhage, 162
indications, 155–156
primary implantation technique, 162
secondary surgical technique, 157–161
distal haptic preparation, 157–158, 158
insertion technique, 158–159, 160–161
IOL exchange, 159, 161
proximal haptic preparation, 158, 159
Trauma, Fuchs’ corneal dystrophy, phacoemulsification, 170
Trough dimensions, phacoemulsification sculpting, 83
Trypan Blue Stain
continuous curvilinear capsulorrhesis, intumescent cataract, 41–42
mature cataracts
clear corneal phaco surgery, 268–269
“nonstop” phaco chop complications, 273
two-handed vitrectomy technique, 136–138, 137
Type IV collagen, lens capsule anatomy, 36–37

U
Ultrasonic fragmentation, posterior segment lens retention, 205–206, 206
Ultrasound power
phacodynamic complications, 200–202
phacoemulsification sculpting, 81
Ultrasound tip design, phacoemulsification sculpting, 81
Ultrata Foldable Lens Cutter and Retriever, transscleral posterior chamber intraocular lens (TS PCL) implantation, 161
Utrata forceps, iris stretch, 50
Uveitis-glaucoma-hyphema (UGH) syndrome, transscleral posterior chamber intraocular lens (TS PCL), 155–156
Vacuum level management
phacodynamic complications, flow management, 195–196
phacoemulsification sculpting, 81, 83
Vacuum level management, phacodynamic complications, techniques, 197–200, 199
Vacuum pump, phacodynamic complications, 195
Vertical phaco chop, vs. horizontal chop, 278–279
Virtual reality device, topical anesthesia, 18, 18–19
Viscoanastomosis, glaucoma management, 226, 230
Viscoelastic
cataract surgery damage repair, research background, 182
classification, 183–184
clear corneal phaco surgery
irrigation and aspiration, 264
zonular dialysis, 269
content, molecular weight, and zero-shear viscosity, 183
cortex mobilization, 253–254
Viscoelastic (continued)

Descemet’s membrane complications, 174, 174–175
dispersive/cohesive elastics
  background, 182–183, 183
  soft shell technique, 186–189, 187
endothelial damage, 180
Healon5, 189–192
  biomechanical properties, 189–191, 190–191
  removal, 191–192, 192
  surgical applications, 191, 192
higher viscosity-cohesive viscoelastics, 184–185
lower-viscosity dispersive elastics, 185–186
posterior capsular tear and insertion of, 258, 258
pseudoplasticity, 183, 184
surgical applications, 185, 187
removal, 189–192, 192
surgical applications, 185, 187

Visual acuity, posterior chamber IOL dislocation, 211, 211

Vitrectomy
absence of irrigation, 138, 138
BSS replacement refractive index, 140
coaixal infusion, 135–136
dropped nucleus, 139
gas replacement, intraocular lens power calculations, 142
intraocular lens
  material and positioning, 140–141
  shape selection, 140
irrigation with, 138
posterior capsular tear management, 265–267, 267
posterior segment lens retention, 206
postoperative care, 138–139
silicone oil replacement
  axial length measurement, 141–142
  intraocular lens compatibility, 141
  intraocular lens power calculations, 142
  refractive index, 141
two-handed incision, 136–138, 137

Vitreous body
anatomy, 133
infusion/aspiration balance, 134–135
management of, 133–134
posterior capsular tears, nucleus loss into, 131
semielasticity, 135, 136
Vitreous hemorrhage, transscleral posterior chamber intraocular lens (TS PCL) implantation, 163
Vitreous loss
capsular fracture, nonpenetrating trabecular surgery (NPTS), 236
complications following, 133
dropped nucleus, 139
Vitreous management, zonule-compromised surgery, 118
Vitreous penetration, posterior capsular tears, Sheets’ glide, 129, 130
Vitreous valve removal, positive pressure complications, 66, 66

W
Worst-Fechner “lobster-claw” IOL, implantation, 146, 147
Worst “two-loop” medallion IOL, 146
Wound burn
  phacodynamic complications, 201–202
  wound complications, 34
Wound construction and closure
  clear corneal phaco surgery, 265
  complications
    burn injuries, 34
    conjunctival hydration, 33–34
    Descemet’s detachment, 34
    inaccuracy complications, 32–33
    tunnel hemorrhage, 35
    gape repair techniques, 34–35
    incision location, 31
    “one-stitch” closure, foldable intraocular lens, 28
    sutureless cataract surgery, 28–31, 29–30

X
Xylocaine, topical gel anesthesia, 16

Z
Zero-shear viscosity, higher viscosity-cohesive viscoelastics, 185
Zonular dialysis
  clear corneal phaco surgery, 269–270
  continuous curvilinear capsulorrhexis, 44–46
  micro-iris retractors, 119, 119
  phaco chop complications, 96–98, 97–98
Zonule
  anatomic abnormalities, continuous curvilinear capsulorrhexis, 41
  compromise and dislocation
    anatomic and etiologic considerations, 116, 117
    capsular tension rings, 119–122, 119–122
    IOL selection and insertion, 119
    micro-iris retractors, 119, 119
    patient evaluation, 116–117
    surgical management, 117–118, 118
  vitreous management, 118
  fracture, soft shell dispersive-cohesive viscoelastic technique, 188
  “nonstop” phaco chop complications with loose zonules, 273, 275
  weakness or absence, phaco flip contraindications, 103
