The Bobath Concept in Adult Neurology

Bearbeitet von
Bente Elisabeth Bassoe Gjelsvik, Line Syre

ISBN 978 3 13 145451 5
Format (B x L): 17 x 24 cm
Contents

Introduction .................................. 1
The Bobaths: A Historical Overview .......... 1
The International Bobath Instructors
Training Association—IBITA .................. 1
IBITA’s Theoretical Assumptions
and Clinical Practice ........................... 3

1 Applied Neurophysiology ................. 5
1.1 Systems Control: Systems and
Structures Concerned with Movement
and Sensorimotor Integration ................. 6
The Neuromuscular System ...................... 6
The Somatosensory System, Vision,
and Balance ................................... 14
The Brain and Spinal Cord ...................... 23
1.2 Plasticity ................................... 47
Neuroplasticity .................................. 49
1.3 Consequences of and Reorganization
after CNS Lesions .............................. 56
Upper Motor Neuron Lesions ................... 58
The Complex Problem of the Upper
Motoneuron Syndrome ......................... 60

2 Physiotherapy ............................... 67
2.1 Balance and Movement ...................... 68
Human Movement Control ...................... 68
Balance .......................................... 69
Deviations from Normal Movement
and Balance Control ............................ 81
2.2 Intervention—Considerations and
Choices .......................................... 90
Postural Sets ..................................... 90
Analysis of Basic Postures
and Postural Sets ............................... 91
Key Areas ....................................... 108
Selective Movement and Functional
Activity .......................................... 110
The Relationship between Automatic
and Voluntary Movement ...................... 112
Handling ......................................... 116
Active Movement; Learned Nonuse;
Neglect; Passive Movement ................... 125
Control of Associated Reactions .............. 127
Feedback ......................................... 128
Carry-over ....................................... 130

2.3 Other Interventions: Some Key Points 132
Strength Training ............................... 132
Treadmill Training ............................... 133
Multidisciplinary Teamwork ................... 135
Assistive Devices ............................... 135
Medical Intervention for the Treatment
of Spasticity ..................................... 141

3 Assessment ................................. 145
3.1 The International Classification of
Functioning, Disability, and Health ......... 145
3.2 Physiotherapy Assessment ................. 147
History .......................................... 148
Functional Activity ............................. 149
Body Functions and Structures ............... 151
Sensation, Perception, and
Learned Nonuse ............................... 154
Pain ............................................. 156
Clinical Reasoning ............................. 157
The Aim of Assessment ....................... 158
3.3 Outcome Measures ........................ 163
Body Structure and Function Measures ....... 163
Activity Measures .............................. 164
Self-Report Measures ......................... 165
Objective Goal Setting ......................... 165
Assessment Diagram ........................... 165
Evaluation and Documentation .............. 166
Conclusion ..................................... 166

4 Case Histories ............................... 169
4.1 Case History: Sissel ......................... 169
Past Medical History, Social History,
Activities, and Participation ................. 169
History of Present Illness ...................... 169
Assessment ..................................... 170
Clinical Reasoning and Hypothesis ......... 175
