Interest Rate Models - Theory and Practice

With Smile, Inflation and Credit

Bearbeitet von
Damiano Brigo, Fabio Mercurio

Neuausgabe 2007. Buch. LVI, 982 S. Hardcover
ISBN 978 3 540 22149 4
Format (B x L): 15,5 x 23,5 cm
Gewicht: 920 g

Weitere Fachgebiete > Mathematik > Stochastik > Wahrscheinlichkeitsrechnung

DIE FACHBUCHHANDLUNG

Die Online-Fachbuchhandlung beck-shop.de ist spezialisiert auf Fachbücher, insbesondere Recht, Steuern und Wirtschaft. Im Sortiment finden Sie alle Medien (Bücher, Zeitschriften, CDs, eBooks, etc.) aller Verlage. Ergänzt wird das Programm durch Services wie Neuerscheinungsdienst oder Zusammenstellungen von Büchern zu Sonderpreisen. Der Shop führt mehr als 8 Millionen Produkte.
## Contents

Preface .............................................................. VII  
Motivation ............................................................ VII  
Aims, Readership and Book Structure .............................. XII  
Final Word and Acknowledgments ................................ XIV  
Description of Contents by Chapter ............................... XIX  

Abbreviations and Notation ........................................ XXXV

### Part I. BASIC DEFINITIONS AND NO ARBITRAGE

1. **Definitions and Notation** ........................................ 1  
   1.1 The Bank Account and the Short Rate ......................... 2  
   1.2 Zero-Coupon Bonds and Spot Interest Rates .................. 4  
   1.3 Fundamental Interest-Rate Curves ............................ 9  
   1.4 Forward Rates ............................................... 11  
   1.5 Interest-Rate Swaps and Forward Swap Rates ................. 13  
   1.6 Interest-Rate Caps/Floors and Swaptions .................... 16  

2. **No-Arbitrage Pricing and Numeraire Change** .................. 23  
   2.1 No-Arbitrage in Continuous Time ............................. 24  
   2.2 The Change-of-Numeraire Technique .......................... 26  
   2.3 A Change of Numeraire Toolkit (Brigo & Mercurio 2001c) ..... 28  
      2.3.1 A helpful notation: “DC” .................................. 35  
   2.4 The Choice of a Convenient Numeraire ....................... 37  
   2.5 The Forward Measure ......................................... 38  
   2.6 The Fundamental Pricing Formulas ............................ 39  
      2.6.1 The Pricing of Caps and Floors .......................... 40  
   2.7 Pricing Claims with Deferred Payoffs ........................ 42  
   2.8 Pricing Claims with Multiple Payoffs ........................ 42  
   2.9 Foreign Markets and Numeraire Change ...................... 44
3. **One-factor short-rate models** ........................................... 51
   3.1 Introduction and Guided Tour ....................................... 51
   3.2 Classical Time-Homogeneous Short-Rate Models .................. 57
      3.2.1 The Vasicek Model .......................................... 58
      3.2.2 The Dothan Model .......................................... 62
      3.2.3 The Cox, Ingersoll and Ross (CIR) Model .................. 64
      3.2.4 Affine Term-Structure Models .............................. 68
      3.2.5 The Exponential-Vasicek (EV) Model ....................... 70
   3.3 The Hull-White Extended Vasicek Model ........................... 71
      3.3.1 The Short-Rate Dynamics ................................... 72
      3.3.2 Bond and Option Pricing ................................... 75
      3.3.3 The Construction of a Trinomial Tree ..................... 78
   3.4 Possible Extensions of the CIR Model ............................. 80
   3.5 The Black-Karasinski Model ....................................... 82
      3.5.1 The Short-Rate Dynamics ................................... 83
      3.5.2 The Construction of a Trinomial Tree ..................... 85
   3.6 Volatility Structures in One-Factor Short-Rate Models ......... 86
   3.7 Humped-Volatility Short-Rate Models ............................ 92
   3.8 A General Deterministic-Shift Extension ......................... 95
      3.8.1 The Basic Assumptions ...................................... 96
      3.8.2 Fitting the Initial Term Structure of Interest Rates ... 97
      3.8.3 Explicit Formulas for European Options ................... 99
      3.8.4 The Vasicek Case ........................................... 100
   3.9 The CIR++ Model .................................................. 102
      3.9.1 The Construction of a Trinomial Tree ..................... 105
      3.9.2 Early Exercise Pricing via Dynamic Programming .......... 106
      3.9.3 The Positivity of Rates and Fitting Quality .............. 106
      3.9.4 Monte Carlo Simulation .................................... 109
      3.9.5 Jump Diffusion CIR and CIR++ models (JCIR, JCIR++) .... 109
   3.10 Deterministic-Shift Extension of Lognormal Models .......... 110
   3.11 Some Further Remarks on Derivatives Pricing .................. 112
      3.11.1 Pricing European Options on a Coupon-Bearing Bond ..... 112
      3.11.2 The Monte Carlo Simulation ................................ 114
      3.11.3 Pricing Early-Exercise Derivatives with a Tree ......... 116
      3.11.4 A Fundamental Case of Early Exercise: Bermudan-Style Swaptions .................................................... 121
   3.12 Implied Cap Volatility Curves .................................. 124
      3.12.1 The Black and Karasinski Model ................................ 125
      3.12.2 The CIR++ Model ........................................... 126
      3.12.3 The Extended Exponential-Vasicek Model .................. 128
   3.13 Implied Swaption Volatility Surfaces ............................ 129
      3.13.1 The Black and Karasinski Model ............................ 130
3.13.2 The Extended Exponential-Vasicek Model .............. 131
3.14 An Example of Calibration to Real-Market Data .......... 132

4. Two-Factor Short-Rate Models .................................. 137
4.1 Introduction and Motivation .................................... 137
4.2 The Two-Additive-Factor Gaussian Model G2++ ............. 142
4.2.1 The Short-Rate Dynamics .................................. 143
4.2.2 The Pricing of a Zero-Coupon Bond ....................... 144
4.2.3 Volatility and Correlation Structures in Two-Factor Models ........................................ 148
4.2.4 The Pricing of a European Option on a Zero-Coupon Bond ............................................. 153
4.2.5 The Analogy with the Hull-White Two-Factor Model . 159
4.2.6 The Construction of an Approximating Binomial Tree . 162
4.2.7 Examples of Calibration to Real-Market Data ............ 166
4.3 The Two-Additive-Factor Extended CIR/LS Model CIR2++ 175
4.3.1 The Basic Two-Factor CIR2 Model ....................... 176
4.3.2 Relationship with the Longstaff and Schwartz Model (LS) ................................................. 177
4.3.3 Forward-Measure Dynamics and Option Pricing for CIR2 .................................................... 178
4.3.4 The CIR2++ Model and Option Pricing ................. 179

5. The Heath-Jarrow-Morton (HJM) Framework .................. 183
5.1 The HJM Forward-Rate Dynamics ............................ 185
5.2 Markovianity of the Short-Rate Process ..................... 186
5.3 The Ritchken and Sankarasubramanian Framework .......... 187
5.4 The Mercurio and Moraleda Model ............................ 191

Part III. MARKET MODELS

6. The LIBOR and Swap Market Models (LFM and LSM) ...... 195
6.1 Introduction ..................................................... 195
6.2 Market Models: a Guided Tour ................................ 196
6.3 The Lognormal Forward-LIBOR Model (LFM) ............... 207
6.3.1 Some Specifications of the Instantaneous Volatility of Forward Rates ..................................... 210
6.3.2 Forward-Rate Dynamics under Different Numeraire ....... 213
6.4 Calibration of the LFM to Caps and Floors Prices ........... 220
6.4.1 Piecewise-Constant Instantaneous-Volatility Structures 223
6.4.2 Parametric Volatility Structures .......................... 224
6.4.3 Cap Quotes in the Market ................................. 225
6.5 The Term Structure of Volatility .............................. 226
6.5.1 Piecewise-Constant Instantaneous Volatility Structures 228

7. Cases of Calibration of the LIBOR Market Model | 313

7.1 Inputs for the First Cases | 315

7.2 Joint Calibration with Piecewise-Constant Volatilities as in TABLE 5 | 315

7.3 Joint Calibration with Parameterized Volatilities as in Formulation 7 | 319

7.4 Exact Swaptions “Cascade” Calibration with Volatilities as in TABLE 1 | 322

7.4.1 Some Numerical Results | 330

7.5 A Pause for Thought | 337

7.5.1 First summary | 337

7.5.2 An automatic fast analytical calibration of LFM to swaptions. Motivations and plan | 338

7.6 Further Numerical Studies on the Cascade Calibration Algorithm | 340
7.6.1 Cascade Calibration under Various Correlations and Ranks .................................................. 342
7.6.2 Cascade Calibration Diagnostics: Terminal Correlation and Evolution of Volatilities .................. 346
7.6.3 The interpolation for the swaption matrix and its impact on the CCA ................................... 349
7.7 Empirically efficient Cascade Calibration .................. 351
7.7.1 CCA with Endogenous Interpolation and Based Only on Pure Market Data ........................... 352
7.7.2 Financial Diagnostics of the RCCAEI test results ...... 359
7.7.3 Endogenous Cascade Interpolation for missing swaptions volatilities quotes .......................... 364
7.7.4 A first partial check on the calibrated $\sigma$ parameters stability ....................................... 364
7.8 Reliability: Monte Carlo tests .......................................................... 366
7.9 Cascade Calibration and the cap market ................... 369
7.10 Cascade Calibration: Conclusions ................................. 372

8. Monte Carlo Tests for LFM Analytical Approximations ... 377

8.1 First Part. Tests Based on the Kullback Leibler Information (KLI) ............................................... 378
8.1.1 Distance between distributions: The Kullback Leibler information ........................................ 378
8.1.2 Distance of the LFM swap rate from the lognormal family of distributions ............................ 381
8.1.3 Monte Carlo tests for measuring KLI ......................... 384
8.1.4 Conclusions on the KLI-based approach ............... 391
8.2 Second Part: Classical Tests ...................................... 392
8.3 The “Testing Plan” for Volatilities .............................. 392
8.4 Test Results for Volatilities ........................................... 396
8.4.1 Case (1): Constant Instantaneous Volatilities ........... 396
8.4.2 Case (2): Volatilities as Functions of Time to Maturity 401
8.4.3 Case (3): Humped and Maturity-Adjusted Instantaneous Volatilities Depending only on Time to Maturity 410
8.5 The “Testing Plan” for Terminal Correlations ............ 421
8.6 Test Results for Terminal Correlations ...................... 427
8.6.1 Case (i): Humped and Maturity-Adjusted Instantaneous Volatilities Depending only on Time to Maturity, Typical Rank-Two Correlations .......... 427
8.6.2 Case (ii): Constant Instantaneous Volatilities, Typical Rank-Two Correlations .......................... 430
8.6.3 Case (iii): Humped and Maturity-Adjusted Instantaneous Volatilities Depending only on Time to Maturity, Some Negative Rank-Two Correlations ........ 432

12.9 Joint Calibration to Caps and Swaptions ..................... 539

Part V. EXAMPLES OF MARKET PAYOFFS

13. Pricing Derivatives on a Single Interest-Rate Curve ......... 547
   13.1 In-Arrears Swaps ........................................ 548
   13.2 In-Arrears Caps ......................................... 550
       13.2.1 A First Analytical Formula (LFM) ............... 550
       13.2.2 A Second Analytical Formula (G2++) .......... 551
   13.3 Autocaps ............................................. 551
   13.4 Caps with Deferred Caplets ............................. 552
       13.4.1 A First Analytical Formula (LFM) ............... 553
       13.4.2 A Second Analytical Formula (G2++) .......... 553
   13.5 Ratchet Caps and Floors .................................. 554
       13.5.1 Analytical Approximation for Ratchet Caps with the
             LFM ........................................ 555
   13.6 Ratchets (One-Way Floaters) ............................ 556
   13.7 Constant-Maturity Swaps (CMS) ......................... 557
       13.7.1 CMS with the LFM ................................ 557
       13.7.2 CMS with the G2++ Model ........................ 559
   13.8 The Convexity Adjustment and Applications to CMS ....... 559
       13.8.1 Natural and Unnatural Time Lags ................ 559
       13.8.2 The Convexity-Adjustment Technique ............ 561
       13.8.3 Deducing a Simple Lognormal Dynamics from the Ad-
             justment ...................................... 565
       13.8.4 Application to CMS ................................ 565
       13.8.5 Forward Rate Resetting Unnaturally and Average-
             Rate Swaps ..................................... 566
   13.9 Average Rate Caps ....................................... 568
   13.10 Captions and Floortions ................................. 570
   13.11 Zero-Coupon Swaptions .................................. 571
   13.12 Eurodollar Futures ..................................... 575
       13.12.1 The Shifted Two-Factor Vasicek G2++ Model .... 576
       13.12.2 Eurodollar Futures with the LFM ................. 577
   13.13 LFM Pricing with “In-Between” Spot Rates ............. 578
       13.13.1 Accrual Swaps ................................... 579
       13.13.2 Trigger Swaps ................................... 582
   13.14 LFM Pricing with Early Exercise and Possible Path Dependence584
   13.15 LFM: Pricing Bermudan Swaptions ....................... 588
       13.15.1 Least Squared Monte Carlo Approach ............ 589
       13.15.2 Carr and Yang’s Approach ....................... 591
14. Pricing Derivatives on Two Interest-Rate Curves ................. 607
  14.1 The Attractive Features of G2++ for Multi-Curve Payoffs ... 608
    14.1.1 The Model ................................... 608
    14.1.2 Interaction Between Models of the Two Curves “1”
          and “2” ........................................ 610
    14.1.3 The Two-Models Dynamics under a Unique Conve-
          nient Forward Measure ......................... 611
  14.2 Quanto Constant-Maturity Swaps .................................. 613
    14.2.1 Quanto CMS: The Contract .......................... 613
    14.2.2 Quanto CMS: The G2++ Model ....................... 615
    14.2.3 Quanto CMS: Quanto Adjustment .................... 621
  14.3 Differential Swaps ...................................... 623
    14.3.1 The Contract .................................. 623
    14.3.2 Differential Swaps with the G2++ Model ............... 624
    14.3.3 A Market-Like Formula ............................ 626
  14.4 Market Formulas for Basic Quanto Derivatives .................. 626
    14.4.1 The Pricing of Quanto Caplets/Floorlets .............. 627
    14.4.2 The Pricing of Quanto Caps/Floors ................. 628
    14.4.3 The Pricing of Differential Swaps ................... 629
    14.4.4 The Pricing of Quanto Swaptions .................... 630
  14.5 Pricing of Options on two Currency LIBOR Rates ............... 633
    14.5.1 Spread Options ................................ 635
    14.5.2 Options on the Product .......................... 637
    14.5.3 Trigger Swaps .................................. 638
    14.5.4 Dealing with Multiple Dates ....................... 639

Part VI. INFLATION

15. Pricing of Inflation-Indexed Derivatives ......................... 643
  15.1 The Foreign-Currency Analogy ............................. 644
  15.2 Definitions and Notation ................................ 645
  15.3 The JY Model ........................................ 646

16. Inflation-Indexed Swaps .......................................... 649
  16.1 Pricing of a ZCIIS ..................................... 649
  16.2 Pricing of a YYIIS ..................................... 651
  16.3 Pricing of a YYIIS with the JY Model ...................... 652
  16.4 Pricing of a YYIIS with a First Market Model ............. 654
Table of Contents

16.5 Pricing of a YYIIS with a Second Market Model .............. 657

17. Inflation-Indexed Caplets/Floorlets ............................. 661
  17.1 Pricing with the JY Model ................................ 661
  17.2 Pricing with the Second Market Model ....................... 663
  17.3 Inflation-Indexed Caps .................................... 665

18. Calibration to market data ...................................... 669

19. Introducing Stochastic Volatility ............................... 673
  19.1 Modeling Forward CPI’s with Stochastic Volatility .......... 674
  19.2 Pricing Formulae .......................................... 676
      19.2.1 Exact Solution for the Uncorrelated Case .......... 677
      19.2.2 Approximated Dynamics for Non-zero Correlations ... 680
  19.3 Example of Calibration .................................... 681

20. Pricing Hybrids with an Inflation Component .................... 689
  20.1 A Simple Hybrid Payoff .................................... 689

Part VII. CREDIT

21. Introduction and Pricing under Counterparty Risk .............. 695
  21.1 Introduction and Guided Tour .............................. 696
      21.1.1 Reduced form (Intensity) models .................... 697
      21.1.2 CDS Options Market Models ........................... 699
      21.1.3 Firm Value (or Structural) Models .................... 702
      21.1.4 Further Models ....................................... 704
      21.1.5 The Multi-name picture: FtD, CDO and Copula Func-
      tions .................................................... 705
      21.1.6 First to Default (FtD) Basket ......................... 705
      21.1.7 Collateralized Debt Obligation (CDO) Tranches ........ 707
      21.1.8 Where can we introduce dependence? ................... 708
      21.1.9 Copula Functions .................................... 710
      21.1.10 Dynamic Loss models ................................ 718
      21.1.11 What data are available in the market? .............. 719
  21.2 Defaultable (corporate) zero coupon bonds .................... 723
      21.2.1 Defaultable (corporate) coupon bonds ................. 724
  21.3 Credit Default Swaps and Defaultable Floaters ................ 724
      21.3.1 CDS payoffs: Different Formulations ................. 725
      21.3.2 CDS pricing formulas ................................ 727
      21.3.3 Changing filtration: $\mathcal{F}_t$ without default VS complete
          $\mathcal{G}_t$ ............................................. 728
