Invariant Manifolds for Physical and Chemical Kinetics

Bearbeitet von
Alexander N Gorban, Iliya V Karlin

ISBN 978 3 540 22684 0
Format (B x L): 15,5 x 23,5 cm
Gewicht: 1990 g

Weitere Fachgebiete > Technik > Technik Allgemein > Physik, Chemie für Ingenieure

DIE FACHBUCHHANDLUNG

Die Online-Fachbuchhandlung beck-shop.de ist spezialisiert auf Fachbücher, insbesondere Recht, Steuern und Wirtschaft. Im Sortiment finden Sie alle Medien (Bücher, Zeitschriften, CDs, eBooks, etc.) aller Verlage. Ergänzt wird das Programm durch Services wie Neuerscheinungsdienst oder Zusammenstellungen von Büchern zu Sonderpreisen. Der Shop führt mehr als 8 Millionen Produkte.
Contents

1 Introduction .............................................. 1
   1.1 Ideas and References ................................. 1
   1.2 Content and Reading Approaches ..................... 11

2 The Source of Examples ................................. 21
   2.1 The Boltzmann Equation .............................. 21
      2.1.1 The Equation ................................... 21
      2.1.2 The Basic Properties of the Boltzmann Equation . 23
      2.1.3 Linearized Collision Integral .................... 25
   2.2 Phenomenology and Quasi-Chemical Representation
      of the Boltzmann Equation ......................... 26
   2.3 Kinetic Models ....................................... 27
   2.4 Methods of Reduced Description ..................... 28
      2.4.1 The Hilbert Method ............................. 29
      2.4.2 The Chapman–Enskog Method .................... 30
      2.4.3 The Grad Moment Method ......................... 32
      2.4.4 Special Approximations ......................... 33
      2.4.5 The Method of Invariant Manifold ............... 33
      2.4.6 Quasiequilibrium Approximations ............... 35
   2.5 Discrete Velocity Models ............................ 36
   2.6 Direct Simulation ................................... 36
   2.7 Lattice Gas and Lattice Boltzmann Models .......... 37
      2.7.1 Discrete Velocity Models for Hydrodynamics .... 37
      2.7.2 Entropic Lattice Boltzmann Method .............. 42
      2.7.3 Entropic Lattice BGK Method (ELBGK) .......... 42
      2.7.4 Boundary Conditions ............................ 46
      2.7.5 Numerical Illustrations of the ELBGK .......... 46
   2.8 Other Kinetic Equations ............................. 46
      2.8.1 The Enskog Equation for Hard Spheres ........... 46
      2.8.2 The Vlasov Equation ............................ 48
      2.8.3 The Fokker–Planck Equation .................... 49
   2.9 Equations of Chemical Kinetics
      and Their Reduction .................................. 50
      2.9.1 Dissipative Reaction Kinetics .................. 50
2.9.2 The Problem of Reduced Description in Chemical Kinetics .................. 55
2.9.3 Partial Equilibrium Approximations ........................................ 55
2.9.4 Model Equations ..................................................................... 57
2.9.5 Quasi-Steady State Approximation ........................................ 59
2.9.6 Thermodynamic Criteria for the Selection of Important Reactions .... 61
2.9.7 Opening ................................................................................. 62

3 Invariance Equation in Differential Form ........................................ 65

4 Film Extension of the Dynamics: Slowness as Stability .................. 69
  4.1 Equation for the Film Motion ................................................... 69
  4.2 Stability of Analytical Solutions ................................................. 71

5 Entropy, Quasiequilibrium, and Projectors Field .......................... 79
  5.1 Moment Parameterization .......................................................... 79
  5.2 Entropy and Quasiequilibrium .................................................... 80
  5.3 Thermodynamic Projector without a Priori Parameterization ........ 85
  5.4 Uniqueness of Thermodynamic Projector ................................. 87
    5.4.1 Projection of Linear Vector Field ....................................... 87
    5.4.2 The Uniqueness Theorem .................................................. 88
    5.4.3 Orthogonality of the Thermodynamic Projector and Entropic Gradient Models ...................................................... 90
    5.4.4 Violation of the Transversality Condition, Singularity of Thermodynamic Projection, and Steps of Relaxation ......................... 92
    5.4.5 Thermodynamic Quasiequilibrium Projector, Quasiequilibrium, and Entropy Maximum .................................................. 93
  5.5 Example: Quasiequilibrium Projector and Defect of Invariance for the Local Maxwellians Manifold of the Boltzmann Equation .................. 97
    5.5.1 Difficulties of Classical Methods of the Boltzmann Equation Theory ................................................................. 98
    5.5.2 Boltzmann Equation .......................................................... 99
    5.5.3 Local Manifolds ............................................................. 100
    5.5.4 Thermodynamic Quasiequilibrium Projector ....................... 101
    5.5.5 Defect of Invariance for the LM Manifold ............................ 102
  5.6 Example: Quasiequilibrium Closure Hierarchies for the Boltzmann Equation ................................................................. 103
    5.6.1 Triangle Entropy Method .................................................. 103
    5.6.2 Linear Macroscopic Variables ............................................ 106
5.6.3 Transport Equations for Scattering Rates
in the Neighbourhood of Local Equilibrium.
Second and Mixed Hydrodynamic Chains ............... 113
5.6.4 Distribution Functions
of the Second Quasiequilibrium Approximation
for Scattering Rates ...................................... 116
5.6.5 Closure of the Second and Mixed Hydrodynamic Chains123
5.6.6 Appendix:
Formulas of the Second Quasiequilibrium
Approximation of the Second
and Mixed Hydrodynamic Chains
for Maxwell Molecules and Hard Spheres ............... 126
5.7 Example: Alternative Grad Equations
and a “New Determination of Molecular Dimensions”
(Revisited) ............................................ 131
5.7.1 Nonlinear Functionals Instead of Moments
in the Closure Problem................................. 132
5.7.2 Linearization ..................................... 133
5.7.3 Truncating the Chain ............................. 134
5.7.4 Entropy Maximization ............................. 134
5.7.5 A New Determination of Molecular Dimensions
(Revisited) ........................................... 136

6 Newton Method
with Incomplete Linearization .......................... 139
6.1 The Method .......................................... 139
6.2 Example: Two-Step Catalytic Reaction ............. 141
6.3 Example: Non-Perturbative Correction
of Local Maxwellian Manifold
and Derivation of Nonlinear Hydrodynamics
from Boltzmann Equation (1D) .......................... 144
6.3.1 Positivity and Normalization ....................... 144
6.3.2 Galilean Invariance of Invariance Equation .......... 145
6.3.3 Equation of the First Iteration .................... 146
6.3.4 Parametrix Expansion ............................ 149
6.3.5 Finite-Dimensional Approximations
to Integral Equations ................................. 154
6.3.6 Hydrodynamic Equations .......................... 159
6.3.7 Nonlocality ........................................ 160
6.3.8 Acoustic Spectra .................................. 160
6.3.9 Nonlinearity ....................................... 161
6.4 Example: Non-Perturbative Derivation
of Linear Hydrodynamics
from the Boltzmann Equation (3D) ..................... 163
6.5 Example: Dynamic Correction to Moment Approximations .................................. 170
6.5.1 Dynamic Correction or Extension of the List of Variables? .............................. 170
6.5.2 Invariance Equation for Thirteen-Moment Parameterization ............................. 171
6.5.3 Solution of the Invariance Equation ................................................................. 174
6.5.4 Corrected Thirteen-Moment Equations ............................................................ 175
6.5.5 Discussion: Transport Coefficients, Destroying the Hyperbolicity, etc. .......... 177

7 Quasi-Chemical Representation ................................................................. 179
7.1 Decomposition of Motions, Non-Uniqueness of Selection of Fast Motions, Self-Adjoint Linearization, Onsager Filter, and Quasi-Chemical Representation .......... 179
7.2 Example: Quasi-Chemical Representation and Self-Adjoint Linearization of the Boltzmann Collision Operator .......................................................... 183

8 Hydrodynamics From Grad’s Equations: What Can We Learn From Exact Solutions? ................................................................. 189
8.1 The “Ultra-Violet Catastrophe” of the Chapman-Enskog Expansion .................... 189
8.2 The Chapman–Enskog Method for Linearized Grad’s Equations ......................... 192
8.3 Exact Summation of the Chapman–Enskog Expansion ......................................... 195
8.3.1 The 1D10M Grad Equations ................................................................. 195
8.3.2 The 3D10M Grad Equations ................................................................. 202
8.4 The Dynamic Invariance Principle ................................................................. 212
8.4.1 Partial Summation of the Chapman–Enskog Expansion ............................... 212
8.4.2 The Dynamic Invariance ........................................................................... 215
8.4.3 The Newton Method ............................................................................... 217
8.4.4 Invariance Equation for the 1D13M Grad System ...................................... 223
8.4.5 Invariance Equation for the 3D13M Grad System ...................................... 228
8.4.6 Gradient Expansions in Kinetic Theory of Phonons .................................... 230
8.4.7 Nonlinear Grad Equations ....................................................................... 239
8.5 The Main Lesson ................................................................. 246

9 Relaxation Methods ................................................................. 247
9.1 “Large Stepping” for the Equation of the Film Motion ........................................ 247
9.2 Example: Relaxation Method for the Fokker-Planck Equation ......................... 248

11.3 Example: Natural Projector
for the McKean Model .................................. 316
11.3.1 General Scheme .................................. 316
11.3.2 Natural Projector for Linear Systems .......... 318
11.3.3 Explicit Example of the Fluctuation-Dissipation
Formula ........................................ 319
11.3.4 Comparison with the Chapman-Enskog Method
and Solution of the Invariance Equation .......... 321

12 Geometry of Irreversibility:
The Film of Nonequilibrium States .................. 325
12.1 The Thesis About Macroscopically Definable Ensembles
and the Hypothesis About
Primitive Macroscopically Definable Ensembles .. 325
12.2 The Problem of Irreversibility ........................ 328
12.2.1 The Phenomenon of the Macroscopic Irreversibility .. 328
12.2.2 Phase Volume and Dynamics of Ensembles ........ 329
12.2.3 Macroscopically Definable Ensembles
and Quasiequilibria ................................ 331
12.2.4 Irreversibility and Initial Conditions ............. 334
12.2.5 Weak and Strong Tendency to Equilibrium,
Shaking and Short Memory .......................... 335
12.2.6 Subjective Time and Irreversibility .............. 336
12.3 Geometrization of Irreversibility .................... 336
12.3.1 Quasiequilibrium Manifold ...................... 336
12.3.2 Quasiequilibrium Approximation ................. 339
12.4 Natural Projector
and Models of Nonequilibrium Dynamics .......... 341
12.4.1 Natural Projector ................................ 341
12.4.2 One-Dimensional Model of Nonequilibrium States .. 343
12.4.3 Curvature and Entropy Production:
Entropic Circle and First Kinetic Equations .......... 346
12.5 The Film of Non-Equilibrium States ................. 348
12.5.1 Equations for the Film .......................... 348
12.5.2 Thermodynamic Projector on the Film .......... 349
12.5.3 Fixed Points of the Film Equation ............... 352
12.5.4 The Failure of the Simplest
Galerkin-Type Approximations
for Conservative Systems ........................... 353
12.5.5 Second Order Kepler Models of the Film .......... 355
12.5.6 The Finite Models: Termination at the Horizon Points 356
12.5.7 The Transversal Restart Lemma .................. 359
12.5.8 The Time Replacement, and the Invariance
of the Projector .................................. 360
12.5.9 Correction to the Infinite Models ............... 360
13 Slow Invariant Manifolds for Open Systems......................... 367
13.1 Slow Invariant Manifold for a Closed System
Has Been Found. What Next?................................. 367
13.2 Slow Dynamics in Open Systems.
Zero-Order Approximation
and the Thermodynamic Projector ....................... 368
13.3 Slow Dynamics in Open Systems.
First-Order Approximation ................................. 371
13.4 Beyond the First-Order Approximation: Higher-Order
Dynamic Corrections, Stability Loss
and Invariant Manifold Explosion.......................... 373
13.5 Example: The Universal Limit in Dynamics
of Dilute Polymeric Solutions ......................... 375
  13.5.1 The Problem of Reduced Description
    in Polymer Dynamics ............................... 377
  13.5.2 The Method of Invariant Manifold
    for Weakly Driven Systems ........................ 382
  13.5.3 Linear Zero-Order Equations ..................... 387
  13.5.4 Auxiliary Formulas. 1. Approximations
to Eigenfunctions of the Fokker–Planck Operator .... 388
  13.5.5 Auxiliary Formulas. 2. Integral Relations ....... 390
  13.5.6 Microscopic Derivation of Constitutive Equations .. 391
  13.5.7 Tests on the FENE Dumbbell Model ................. 397
  13.5.8 The Main Results of this Example are as Follows: .. 401
13.6 Example: Explosion of Invariant Manifold,
Limits of Macroscopic Description
for Polymer Molecules, Molecular Individualism,
and Multimodal Distributions ............................. 403
  13.6.1 Dumbbell Models and the Problem
    of the Classical Gaussian Solution Stability ...... 403
  13.6.2 Dynamics of the Moments
    and Explosion of the Gaussian Manifold ......... 405
  13.6.3 Two-Peak Approximation for Polymer Stretching
    in Flow and Explosion of the Gaussian Manifold .. 407
  13.6.4 Polymodal Polyhedron and Molecular Individualism 411

14 Dimension of Attractors Estimation .......................... 419
14.1 Lyapunov Norms, Finite-Dimensional Asymptotics
    and Volume Contraction .............................. 419
14.2 Examples: Lyapunov Norms for Reaction Kinetics ....... 423
14.3 Examples: Infinite-Dimensional Systems  
With Finite-Dimensional Attractors  

14.4 Systems with Inheritance:  
Dynamics of Distributions with Conservation 
of Support, Natural Selection  
and Finite-Dimensional Asymptotics  

14.4.1 Introduction: Unusual Conservation Law  

14.4.2 Optimality Principle for Limit Diversity  

14.4.3 How Many Points  
Does the Limit Distribution Support Hold?  

14.4.4 Selection Efficiency  

14.4.5 Gromov’s Interpretation of Selection Theorems  

14.4.6 Drift Equations  

14.4.7 Three Main Types of Stability  

14.4.8 Main Results About Systems with Inheritance  

14.5 Example: Cell Division Self-Synchronization  

15 Accuracy Estimation and Post-Processing  
in Invariant Manifolds Construction  

15.1 Formulas for Dynamic and Static Post-Processing  

15.2 Example: Defect of Invariance Estimation  
and Switching from the Microscopic Simulations 
to Macroscopic Equations  

15.2.1 Invariance Principle and Micro-Macro Computations  

15.2.2 Application to Dynamics of Dilute Polymer Solution  

16 Conclusion
