Contents

1. Introduction .............................................. 1
   1.1 The Subject of Laser Physics at Relativistic Intensities ...... 1
   1.2 A Review of Basic Studies of Laser Physics at Relativistic Intensities ................................ 5
      1.2.1 Nonlinear Propagation and Self-Focusing of Light in Matter ........................................ 5
      1.2.2 Charged Particle Motions in Electromagnetic Fields .... 6
      1.2.3 Nonlinear Electromagnetic Waves in Plasmas .......... 7
      1.2.4 Scattering of Intense Electromagnetic Radiation in Plasmas ...................................... 7
      1.2.5 Interactions of Intense, Ultrashort, Laser Pulses with Underdense Plasmas ......................... 8
      1.2.6 Interactions of Relativistically Intense Laser Radiation with Overdense Plasmas .................... 11

2. Fundamentals of Cold Plasma Electrodynamics .......... 13
   2.1 Basic Cold Plasma Electrodynamics Equations in Relativistic Notation ...................................... 13
   2.2 Basic Equations in 3-D Form .................................. 16
   2.3 Potential and Vortex Components of Momentum .......... 19
   2.4 Electron Fluid Dynamics with Inertially Frozen Ions ......... 20
      2.4.1 Canonical Variables .................................. 21
      2.4.2 Examples of Exact Solutions ....................... 22

3. Relativistically Intense Electromagnetic Waves in Plasmas 27
   3.1 The Akhiezer–Polovin Problem .............................. 27
   3.2 Linearly Polarized Plane Electromagnetic Waves .......... 29
      3.2.1 Self-Modulation at Relativistic Intensities ........ 29
      3.2.2 Asymptotic Theory in the High-Frequency Limit ... 31
      3.2.3 Quasi-Relativistic Limit ............................. 35
   3.3 Circularly Polarized Plane Electromagnetic Waves .......... 37
### 4. Instabilities of Circularly Polarized Plane Electromagnetic Waves in Plasmas

- 4.1 Equations of Circularly Polarized Wave Instability in Plasmas...
- 4.2 Slab Geometry Instability Equations
  - 4.2.1 Conserved Circular Polarization Approximation...
  - 4.2.2 Instability Growth Rates in Slab Geometry...
- 4.3 3-D Instability Growth Rates
- 4.4 Conclusions...

### 5. Instabilities of Linearly Polarized Plane Electromagnetic Waves in Plasmas

- 5.1 3-D Instability Equations...
- 5.2 Scattering of Linearly Polarized Electromagnetic Waves in 1-D Geometry...
  - 5.2.1 One-Dimensional Scattering Equations...
  - 5.2.2 Propagation of Perturbations Parallel to the Pump Wave...
- 5.3 Scattering Diagrams for 3-D Instability...
- 5.4 Conclusions...

### 6. Models of Nonlinear Propagation of Relativistically Intense Ultrashort Laser Pulses in Plasmas

- 6.1 The Physical Model...
- 6.2 Derivation of the Basic Model Equations...
- 6.3Envelope Approximation...
- 6.4 Long Beam and Large Aperture Limits
  - 6.4.1 Long Beam Limit...
  - 6.4.2 Large Laser Pulse Aperture Limit...
- 6.5 Filamentation and Self-Modulation of Relativistically Intense Laser Radiation in Cold Underdense Plasmas...
- 6.6 Laser Radiation Stimulated Scattering by Plasmons and Third-Harmonics Generation...
- 6.7 Conclusions...

### 7. Intense Laser Pulse Solitons in Plasmas

- 7.1 Soliton Equations and Numerical Solutions...
- 7.2 One-Dimensional Laser Pulse Solitons in the WKB Approximation...
- 7.3 Conclusions...

### 8. Relativistic and Charge-Displacement Self-Channeling of Intense Ultrashort Laser Pulses in Plasmas

- 8.1 Stationary Self-Localized Modes of Beam Propagation...
