Fourier Analysis, Partial Differential Equations and Variational Methods

Bearbeitet von
Kwong-Tin Tang

ISBN 978 3 540 44695 8
Format (B x L): 15,5 x 23,5 cm
Gewicht: 836 g
Contents

Part I Fourier Analysis

1 Fourier Series .................................................. 3
  1.1 Fourier Series of Functions with Periodicity 2π ............. 3
    1.1.1 Orthogonality of Trigonometric Functions ............... 3
    1.1.2 The Fourier Coefficients ................................ 5
    1.1.3 Expansion of Functions in Fourier Series ............... 6
  1.2 Convergence of Fourier Series ............................... 9
    1.2.1 Dirichlet Conditions .................................. 9
    1.2.2 Fourier Series and Delta Function ...................... 10
  1.3 Fourier Series of Functions of any Period ................... 13
    1.3.1 Change of Interval ..................................... 13
    1.3.2 Fourier Series of Even and Odd Functions .............. 21
  1.4 Fourier Series of Nonperiodic Functions in Limited Range ... 24
  1.5 Complex Fourier Series ..................................... 29
  1.6 The Method of Jumps ........................................ 32
  1.7 Properties of Fourier Series .................................. 37
    1.7.1 Parseval’s Theorem ..................................... 37
    1.7.2 Sums of Reciprocal Powers of Integers ................. 39
    1.7.3 Integration of Fourier Series ............................ 42
    1.7.4 Differentiation of Fourier Series ........................ 43
  1.8 Fourier Series and Differential Equations .................... 45
    1.8.1 Differential Equation with Boundary Conditions ......... 45
    1.8.2 Periodically Driven Oscillator .......................... 49
  Exercises .................................................................. 52

2 Fourier Transforms .............................................. 61
  2.1 Fourier Integral as a Limit of a Fourier Series ............... 61
    2.1.1 Fourier Cosine and Sine Integrals ....................... 65
    2.1.2 Fourier Cosine and Sine Transforms .................... 67
  2.2 Tables of Transforms .......................................... 72
2.3 The Fourier Transform ....................................... 72
2.4 Fourier Transform and Delta Function .................. 79
  2.4.1 Orthogonality ...................................... 79
  2.4.2 Fourier Transforms Involving Delta Functions ...... 80
  2.4.3 Three-Dimensional Fourier Transform Pair ........ 81
2.5 Some Important Transform Pairs ......................... 85
  2.5.1 Rectangular Pulse Function .......................... 85
  2.5.2 Gaussian Function .................................. 85
  2.5.3 Exponentially Decaying Function .................... 87
2.6 Properties of Fourier Transform ......................... 88
  2.6.1 Symmetry Property .................................. 88
  2.6.2 Linearity, Shifting, Scaling ........................ 89
  2.6.3 Transform of Derivatives ............................ 91
  2.6.4 Transform of Integral ............................... 92
  2.6.5 Parseval’s Theorem .................................. 92
2.7 Convolution ................................................. 94
  2.7.1 Mathematical Operation of Convolution ............. 94
  2.7.2 Convolution Theorems ................................ 96
2.8 Fourier Transform and Differential Equations .......... 99
2.9 The Uncertainty of Waves .................................. 103
Exercises .................................................. 105

Part II Sturm–Liouville Theory and Special Functions

3 Orthogonal Functions and Sturm–Liouville Problems ...... 111
  3.1 Functions as Vectors in Infinite Dimensional Vector Space .... 111
    3.1.1 Vector Space ...................................... 111
    3.1.2 Inner Product and Orthogonality .................... 113
    3.1.3 Orthogonal Functions ............................... 116
  3.2 Generalized Fourier Series ................................ 121
  3.3 Hermitian Operators .................................... 123
    3.3.1 Adjoint and Self-adjoint (Hermitian) Operators .... 123
    3.3.2 Properties of Hermitian Operators .................. 125
  3.4 Sturm–Liouville Theory .................................. 130
    3.4.1 Sturm–Liouville Equations .......................... 130
    3.4.2 Boundary Conditions of Sturm–Liouville Problems ... 132
    3.4.3 Regular Sturm–Liouville Problems ................... 133
    3.4.4 Periodic Sturm–Liouville Problems .................. 141
    3.4.5 Singular Sturm–Liouville Problems ................... 142
  3.5 Green’s Function ........................................ 149
    3.5.1 Green’s Function and Inhomogeneous Differential Equation .... 149
    3.5.2 Green’s Function and Delta Function ................. 150
Exercises .................................................. 157
4 Bessel and Legendre Functions

4.1 Frobenius Method of Differential Equations
4.1.1 Power Series Solution of Differential Equation
4.1.2 Classifying Singular Points
4.1.3 Frobenius Series

4.2 Bessel Functions
4.2.1 Bessel Functions J_\nu(x) of Integer Order
4.2.2 Zeros of the Bessel Functions
4.2.3 Gamma Function
4.2.4 Bessel Function of Noninteger Order
4.2.5 Bessel Function of Negative Order
4.2.6 Neumann Functions and Hankel Functions

4.3 Properties of Bessel Function
4.3.1 Recurrence Relations
4.3.2 Generating Function of Bessel Functions
4.3.3 Integral Representation

4.4 Bessel Functions as Eigenfunctions of Sturm–Liouville

4.5 Other Kinds of Bessel Functions
4.5.1 Modified Bessel Functions
4.5.2 Spherical Bessel Functions

4.6 Legendre Functions
4.6.1 Series Solution of Legendre Equation
4.6.2 Legendre Polynomials
4.6.3 Legendre Functions of the Second Kind

4.7 Properties of Legendre Polynomials
4.7.1 Rodrigues’ Formula
4.7.2 Generating Function of Legendre Polynomials
4.7.3 Recurrence Relations
4.7.4 Orthogonality and Normalization of Legendre Polynomials

4.8 Associated Legendre Functions and Spherical Harmonics
4.8.1 Associated Legendre Polynomials
4.8.2 Orthogonality and Normalization of Associated Legendre Functions
4.8.3 Spherical Harmonics

4.9 Resources on Special Functions

Exercises
## Contents

**Part III Partial Differential Equations**

### 5 Partial Differential Equations in Cartesian Coordinates

- **5.1 One-Dimensional Wave Equations**
  - 5.1.1 The Governing Equation of a Vibrating String
  - 5.1.2 Separation of Variables
  - 5.1.3 Standing Wave
  - 5.1.4 Traveling Wave
  - 5.1.5 Nonhomogeneous Wave Equations
  - 5.1.6 D’Alembert’s Solution of Wave Equations
- **5.2 Two-Dimensional Wave Equations**
  - 5.2.1 The Governing Equation of a Vibrating Membrane
  - 5.2.2 Vibration of a Rectangular Membrane
- **5.3 Three-Dimensional Wave Equations**
  - 5.3.1 Plane Wave
  - 5.3.2 Particle Wave in a Rectangular Box
- **5.4 Equation of Heat Conduction**
- **5.5 One-Dimensional Diffusion Equations**
  - 5.5.1 Temperature Distributions with Specified Values at the Boundaries
  - 5.5.2 Problems Involving Insulated Boundaries
  - 5.5.3 Heat Exchange at the Boundary
- **5.6 Two-Dimensional Diffusion Equations: Heat Transfer in a Rectangular Plate**
- **5.7 Laplace’s Equations**
  - 5.7.1 Two-Dimensional Laplace’s Equation: Steady-State Temperature in a Rectangular Plate
  - 5.7.2 Three-Dimensional Laplace’s Equation: Steady-State Temperature in a Rectangular Parallelepiped
- **5.8 Helmholtz’s Equations**

### 6 Partial Differential Equations with Curved Boundaries

- **6.1 The Laplacian**
- **6.2 Two-Dimensional Laplace’s Equations**
  - 6.2.1 Laplace’s Equation in Polar Coordinates
  - 6.2.2 Poisson’s Integral Formula
- **6.3 Two-Dimensional Helmholtz’s Equations in Polar Coordinates**
  - 6.3.1 Vibration of a Drumhead: Two Dimensional Wave Equation in Polar Coordinates
  - 6.3.2 Heat Conduction in a Disk: Two Dimensional Diffusion Equation in Polar Coordinates
  - 6.3.3 Laplace’s Equations in Cylindrical Coordinates
  - 6.3.4 Helmholtz’s Equations in Cylindrical Coordinates
