Table of Contents

In these Proceedings, the invited talks are grouped into a separate corpus. Papers are loosely grouped by theme, as were the presentation sessions. Because of these weak groupings, to give names to the sessions would have been misleading.

Invited Talks (Extended Abstracts)

Duration Calculus, a Logical Approach to Real-Time Systems.................................1
Zhou Chaochen

Abstract Algebraic Logic.............................................................8
Don Pigozzi

Systematising Reactive System Design............................................17
Thomas S.E. Maibaum, Pauline Kan, and Kevin Lano

Systematic Design of Call-Coverage Features ........................................23
Pamela Zave

Visual Abstractions for Temporal Verification .........................................28
Zohar Manna, Anca Browne, Henny B. Sipma, and Tomás E. Uribe

A Linear Metalanguage for Concurrency.................................................42
Glynn Winskel

Presentations

Session 1

Verification of Bounded Delay Asynchronous Circuits with Timed Traces ..........59
Tomohiro Yoneda, Bin Zhou, and Bernd-Holger Schlingloff

Verification of Temporal Properties of Processes in a Setting with Data ..........74
Jan Friso Groote and Radu Mateescu

A Logic for Real-Time Systems Specification, Its Algebraic Semantics, and Equational Calculus ..........................................................91
Gabriel A. Baum, Marcelo F. Frias, and Thomas S.E. Maibaum

Effective Recognizability and Model Checking of Reactive Fiffo Automata ....106
Gregoire Sutre, Alain Finkel, Olivier Roux, and Franck Cassez

Combining Methods for the Livelock Analysis of a Fault-Tolerant System ....124
Bettina Buth, Jan Peleska, and Hui Shi

Session 2

Separating Sets by Modal Formulas..................................................140
Bernhard Heinemann

Interpolation in Modal Logic..........................................................154
Maarten Marx
Building Models of Linear Logic .................................................................164
Valeria de Paiva and Andrea Schalk

Term Rewriting in a Logic of Special Relations ..............................................178
W. Marco Schorlemmer

Abstraction Barriers in Equational Proof .......................................................196
Jo Erskine Hannay

Session 3
A Synergy Between Model-Checking and Type Inference for the Verification
of Value-Passing Higher-Order Processes....................................................214
Mourad Debbabi, Abdelkader Benzakour, and Béchir Ktari

A Trace-Based Refinement Calculus for Shared-Variable Parallel Programs........231
Jürgen Dingel

Consistency of Partial Process Specifications .................................................248
Maarteen Steen, John Derrick, Eerke Boiten, and Howard Bowman

Observational Logic .....................................................................................263
Rolf Hennicker and Michel Bidoit

Scheduling Algebra .....................................................................................278
Rob van Glabbeek and Peter Rittgen

Session 4
Algebraic Semantics of Coordination or What Is in a Signature? .................293
José Luiz Fiadeiro and Antónia Lopes

An Algebraic Approach to Combining Processes in a Hardware/Software
Partitioning Environment ............................................................................308
Leila Silva, Augusto Sampaio, Edna Barros, and Juliano Iyoda

An Algebraic View of Program Composition ..............................................325
Pietro Cenciarelli

Architectural Specifications in CASL ...........................................................341
Michel Bidoit, Donald Sannella, and Andrzej Tarlecki

Pi-Congruences as CCS Equivalences .........................................................358
Paola Quaglia

Session 5
Algebraic Specifications, Higher-Order Types, and Set-Theoretic Models ....373
Hélène Kirchner and Peter D. Mosses

Type Analysis for CHIP ...............................................................................389
Wlodzimierz Drabent and Pawel Pietrzak

Categorical Programming with Abstract Data Types ..................................406
Martin Erwig

Condensing Lemmas for Pure Type Systems with Universes ....................422
Blas C. Ruiz Jiménez
Improving Computations in a Typed Functional Logic Language
Jesús Manuel Almendros-Jiménez

Session 6
Abstract Interpretation of Prolog Programs
Fausto Spoto and Giorgio Levi

Factorizing Equivalent Variable Pairs in ROBDD-Based Implementation of Pos
Robert Bagnara and Peter Schachte

A Single Perspective on Arrows between Institutions
Alfio Martini and Uwe Wolter

On Oracles for Interpreting Test Results against Algebraic Specifications
Patrícia D. L. Machado

Systems and Tool Demonstrations

RECOPLA: An Extendible Graphic Meta-Editor
Zoltan Gassmann, Luis Mandel, and Roshan Sembacuttiaratchy

The State of PEP
Bernd Grahlmann

The ABACO System - An Algebraic Based Action COmpiler
Hermano Perrelli de Moura and Luis Carlos de Sousa Menezes
