Astronomical Optics and Elasticity Theory

Active Optics Methods

Bearbeitet von
Gérard René Lemaitre

ISBN 978 3 540 68904 1
Format (B x L): 15,5 x 23,5 cm
Gewicht: 1057 g
## Contents

**Notations** .......................................................... xix  

1 **Introduction to Optics and Elasticity** ........................................ 1  
1.1 Optics and Telescopes – Historical Introduction .......................... 1  
1.1.1 The Greek Mathematicians and Conics ................................. 1  
1.1.2 The Persian Mathematicians and Mirrors .............................. 3  
1.1.3 End of European Renaissance and Birth of Telescopes .......... 5  
1.1.4 Refractive Telescopes .................................................. 6  
1.1.5 Reflective Telescopes ................................................... 13  
1.2 Snell’s Law and Glass Dispersion ........................................... 26  
1.3 Fermat’s Principle ............................................................ 29  
1.4 Gaussian Optics and Conjugate Distances .................................. 31  
1.4.1 Diopter of Curvature $c = 1/R$ ....................................... 32  
1.4.2 Mirror in Medium $n$ .................................................... 34  
1.4.3 Power of Combined Systems .......................................... 35  
1.4.4 Lens in Air or in Vacuum .............................................. 35  
1.4.5 Afocal Systems .......................................................... 36  
1.4.6 Pupils and Principal Rays ............................................. 37  
1.4.7 Aperture Ratio or Focal Ratio ....................................... 37  
1.5 Lagrange Invariant ........................................................... 38  
1.6 Étendue Invariant and Lagrange Invariant ................................. 39  
1.6.1 Lagrange Invariant ...................................................... 39  
1.6.2 Étendue Invariant ...................................................... 39  
1.6.3 Equivalence of the Étendue and Lagrange Invariants ............ 40  
1.7 Analytical Representation of Optical Surfaces ............................ 41  
1.7.1 Conicoids ............................................................... 42  
1.7.2 Spheroids ............................................................... 43  
1.7.3 Non-Axisymmetric Surfaces and Zernike Polynomials .......... 43  
1.8 Seidel Representation of Third-Order Aberrations ....................... 45  
1.8.1 The Seidel Theory ...................................................... 45  
1.8.2 Seidel Aberration Modes – Elastic Deformation Modes .......... 49  
1.8.3 Zernike rms Polynomials ............................................. 50  
1.9 Stigmatism, Aplanatism, and Anastigmatism ............................. 52  
1.9.1 Stigmatism .............................................................. 52

## Contents

1.14.3  Active Optics and Time-Dependence Control ................................... 129
1.14.4  Various Aspect of Active Optics ..................................................... 130

References .................................................................................................. 130

2  Dioptrics and Elasticity – Variable Curvature Mirrors (VCMs) .......... 137
2.1  Thin Circular Plates and Small Deformation Theory ....................... 137
    2.1.1  Plates of Constant Thickness Distribution – CTD ..................... 137
    2.1.2  Plates of Variable Thickness Distribution – VTD –
          Cycloid-Like form – Tulip-Like Form ....................................... 139
    2.1.3  Optical Focal-Ratio Variation .................................................. 144
    2.1.4  Buckling Instability ................................................................. 144
2.2  Thin Plates and Large Deformation Theory – VTD ......................... 145
2.3  The Mersenne Afocal Two-Mirror Telescopes ................................... 150
2.4  Beam Compressors, Expanders and Cat’s Eyes – Active Optics
    Pupil Transfers .................................................................................. 153
2.5  VCMs as Field Compensators of Interferometers .............................. 154
    2.5.1  Fourier Transform Spectrometers ............................................ 155
    2.5.2  Stellar Interferometers and Telescope Arrays ............................ 156
2.6  Construction of VCMs with VTDs ....................................................... 158
    2.6.1  Elastic Deformability and Choice of Material Substrate ............... 158
    2.6.2  Zoom Range and Choice of a Thickness Distribution ................. 160
    2.6.3  Achievement of Boundary Conditions ...................................... 160
    2.6.4  Design and Results with VTD Type 1 – Cycloid-Like Form .......... 161
    2.6.5  Design and Results with a VTD Type 2 – Tulip-Like Form ........... 162
2.7  Plasticity and Hysteresis ..................................................................... 163
    2.7.1  Stress-Strain Linearization and Plasticity Compensation ............ 163
    2.7.2  Hysteresis Compensation and Curvature Control ....................... 166

References ............................................................................................... 168

3  Active Optics and Correction of Third-Order Aberrations ................. 171
3.1  Elasticity Theory with Constant Thickness Distributions – CTD
    Class ...................................................................................................... 171
3.2  Elasticity Theory with Variable Thickness Distributions – VTD
    Class ...................................................................................................... 171
3.3  Active Optics and Third-Order Spherical Aberration ....................... 177
    3.3.1  Configurations in the CTD Class (A_1 = A_2 = 0) .................... 178
    3.3.2  Configurations in the VTD Class ............................................... 179
    3.3.3  Hybrid Configurations ............................................................... 182
    3.3.4  Balance with a Curvature Mode ................................................. 184
    3.3.5  Examples of Application ............................................................ 185
3.4  Active Optics and Third-Order Coma ................................................. 188
    3.4.1  Configuration in the CTD Class (A_1 = 0) ................................. 189
    3.4.2  Configuration in the VTD Class ............................................... 190
    3.4.3  Hybrid Configurations ............................................................... 192
    3.4.4  Balance with a Tilt Mode ........................................................... 192
3.4.5 Coma from a Pupil and Concave Mirror System .......... 194
3.4.6 Examples of Active Optics Coma Correction ........... 195
3.5 Active Optics and Third-Order Astigmatism ............... 198
  3.5.1 Configuration in the CTD Class \((A_2 = 0)\) .............. 199
  3.5.2 Configuration in the VTD Class ........................ 200
  3.5.3 Hybrid Configurations ............................... 201
  3.5.4 Balance with a Curvature Mode and Cylindric
        Deformations ..................................... 201
  3.5.5 Sagittal and Tangential Ray Fans in Mirror Imaging .... 202
  3.5.6 Aspherization of Concave Mirrors – Examples ......... 206
  3.5.7 Concave Diffraction Gratings and Saddle Correction .. 209
  3.5.8 Aspherization of Single Surface Spectrographs – Example 212
  3.5.9 Higher-Order Aspherizations of Single Surface
        Spectrographs ....................................... 213
References .................................................................... 214

4 Optical Design with the Schmidt Concept – Telescopes and
Spectrographs .................................................................... 217
  4.1 The Schmidt Concept ........................................ 217
    4.1.1 The Class of Two-Mirror Anastigmatic Telescopes .... 217
    4.1.2 Wavefront Analysis at the Center of Curvature
          of a Spherical Mirror ............................... 222
    4.1.3 Wavefront Equation Including the Magnification Ratio \(M\) 225
    4.1.4 Optical Design of Correctors – Preliminary Remarks 225
    4.1.5 Object at Infinity – Null Power Zone Positioning ... 226
    4.1.6 Optical Equation of Various Corrective Elements .... 227
    4.1.7 Under or Over Correction Factor \(s\) .................... 228
  4.2 Refractive Corrector Telescopes ............................ 229
    4.2.1 Off-axis Aberrations and Chromatism of a Singlet
          Corrector ............................................. 229
    4.2.2 Achromatic Doublet-Plate Corrector ..................... 232
    4.2.3 Singlet Corrector in Blue and Additional Monocentric
          Filters in Red ....................................... 233
  4.3 All-Reflective Telescopes .................................... 234
    4.3.1 Centered Optical Systems used Off-axis ............... 235
    4.3.2 Non-Centered Optical Systems ......................... 237
    4.3.3 Gain of Non-Centered Systems Over Centered Designs 239
    4.3.4 LAMOST: A Giant Non-Centered Schmidt
          with Active Optics .................................. 240
  4.4 All-Reflective Spectrographs with Aspherical Gratings .... 242
    4.4.1 Comparison of Reflective Grating Spectrograph Designs 242
    4.4.2 Diffraction Grating Equation .......................... 243
    4.4.3 Axisymmetric Gratings \((\beta_0 = 0)\) .................. 244
    4.4.4 Bi-Axial Symmetric Gratings \((\beta_0 \neq 0)\) ............ 245
    4.4.5 Flat Fielding of All-Reflective Aspherized
          Grating Spectrographs ............................. 246
5 Schmidt Correctors and Diffraction Gratings Aspherized by Active Optics ................................................................. 263
  5.1 Various Types of Aspherical Schmidt Correctors ................. 263
  5.2 Refractive Correctors ............................................. 263
    5.2.1 Third-Order Optical Profile of Refractive Correctors ....... 263
    5.2.2 Elasticity and Circular Constant Thickness Plates .......... 264
    5.2.3 Refractive Correctors and the Spherical Figuring Method .. 265
    5.2.4 Refractive Correctors and the Plane Figuring Method .... 268
    5.2.5 Glass Rupture and Loading Time Dependance .......... 273
  5.3 Reflective Correctors .............................................. 276
    5.3.1 Optical Figure of the Primary Mirror .......................... 276
    5.3.2 Axisymmetric Circular Primaries with \( k = \frac{3}{2} \) – Vase Form ......................................................... 277
    5.3.3 Bisymmetric Circular Primaries with \( k = \frac{3}{2} \) – MDM .... 279
    5.3.4 Bisymmetric Circular Primaries with \( k = 0 \) – Tulip Form . 279
    5.3.5 Bisymmetric Elliptical Primary Mirror with \( k = \frac{3}{2} \) – Vase Form – Biplate Form .................................. 282
    5.3.6 LAMOST: A Segmented Bisymmetric Elliptical Primary . 293
  5.4 Aspherized Reflective Diffraction Gratings .......................... 293
    5.4.1 Active Optics Replication for Grating Aspherization ........ 293
    5.4.2 Optical Profile of Aspherical Reflective Gratings .......... 294
    5.4.3 Axisymmetric Gratings with \( k = \frac{3}{2} \) and Circular Built-in Submasters ............................................. 296
    5.4.4 Axisymmetric Gratings with \( k = 0 \) and Circular Simply Supported Submasters ............................................. 302
    5.4.5 Bisymmetric Gratings with \( k = \frac{3}{2} \) and Elliptic Built-in Submasters ............................................. 304
    5.4.6 Constructional Replication Condition for Active Optics Process ......................................................... 309
  References ........................................................................ 310

6 Theory of Shells and Aspherization of Axisymmetric Mirrors – Meniscus, Vase and Closed Forms ...................................... 313
  6.1 Active Optics Aspherization of Fast f-Ratio Mirrors................. 313
  6.2 Theory of Shallow Spherical Shells .................................... 313
6.2.1 Equilibrium Equations for Axisymmetric Loadings .......................... 314
6.2.2 General Equation of Shallow Spherical Shells ............................... 315
6.2.3 Kelvin Functions ........................................................................ 318
6.2.4 Flexure and Stress Function of Shallow Spherical Shells .............. 320
6.3 Variable Thickness Shell and Continuity Conditions ....................... 322
6.3.1 Shell Relations for a Constant Thickness Ring Element ............... 323
6.3.2 Various Boundaries and Constant Thickness Plain Shells .............. 323
6.3.3 Some Quantities Involved in a Variable Thickness Shell .............. 324
6.3.4 Continuity Conditions of a Shell Element Ring ........................... 325
6.4 Edge Cylinder Link and Boundary Conditions .................................. 327
6.4.1 Three Geometrical Configurations and Boundaries ...................... 327
6.4.2 Outer Cylinder Linked to a Meniscus Shell ................................... 328
6.5 Determination of a Variable Thickness Vase Shell .......................... 332
6.5.1 Flexure Representation in the Shell \( z, r \) Main Frame .................. 332
6.5.2 Inverse Problem and Thickness Distribution .............................. 333
6.6 Active Optics Aspherization of Telescope Mirrors ........................... 333
6.6.1 Active Optics Co-addition Law .................................................. 333
6.6.2 Parabolization of Concave Mirrors ............................................. 334
6.6.3 Concave Paraboloid Mirrors with a Central Hole .......................... 339
6.6.4 Aspherization of Concave Spheroid Mirrors ............................... 342
6.6.5 Aspherization of Cassegrain Mirrors .......................................... 345
6.6.6 Comparison of Various Wide-Field Telescope Designs ................. 350
6.6.7 Modified-Rumsey Three-Reflection Telescope Mirrors ................. 352
6.6.8 Mirror Aspherizations of a Large Modified-Rumsey Telescope ....... 360
References ......................................................................................... 363

7 Active Optics with Multimode Deformable Mirrors (MDM) Vase
and Meniscus Forms .......................................................................... 365
7.1 Introduction – Clebsch-Seidel Deformation Modes ........................... 365
7.2 Elasticity and Vase-Form MDMs ..................................................... 366
7.3 Elasticity and Meniscus-Form MDMs .............................................. 374
7.4 Degenerated Configurations and Astigmatism Mode ........................ 376
7.4.1 Special Geometry for the Astigmatism Mode ............................... 376
7.4.2 Single Astm 3 Mode and Degenerated Meniscus Form ............... 377
7.4.3 Single Astm 3 Mode and Degenerated Vase Form ....................... 378
7.5 Meniscus Form and Segments for Large Telescopes ....................... 378
7.5.1 Off-Axis Segments of a Paraboloid Mirror ................................. 379
7.5.2 Off-Axis Segments of a Conicoid Mirror .................................... 383
7.5.3 Segments of the Keck Telescope ................................................. 384
7.6 Vase and Meniscus MDMs for Reflective Schmids ......................... 385
7.6.1 Centered Systems with a Circular Vase-Form Primary ................ 385
7.6.2 Non-Centered Systems and Circular Vase-Form Primary ............. 386
7.6.3 Non-Centered Systems and Elliptical Vase-Form Primary .......... 388
7.6.4 In-situ Aspherized Meniscus Segments of LAMOST .................... 388
7.7 Vase MDMs for Liquid Mirror Telescopes ......................... 390
  7.7.1 Zenithal Observations with LMTs .......................... 390
  7.7.2 Field Distortions and Four-Lens Correctors for LMTs ...... 391
  7.7.3 LMT Concepts with MDMs for Off-Zenith Observations .... 392
7.8 MDMs as Recording Compensators for Holographic Gratings .... 395
  7.8.1 Holographic Gratings Correcting Aberrations ............... 395
  7.8.2 Design Example for the COS Gratings of HST–Recording Parameters ........................................ 396
  7.8.3 Elasticity Design of a Six-Arm MDM as Recording Compensator ........................................ 398
7.9 Degenerated Configurations and Triangle Mode ................. 402
  7.9.1 Special Geometry for the Triangle Mode ..................... 402
  7.9.2 Single Tri 3 Mode and Degenerated Meniscus Form ......... 402
  7.9.3 Single Tri 3 Mode and Degenerated Vase Form ............. 403
7.10 Single Mode and Deformable Outer Ring ....................... 404
  7.10.1 Outer Ring Designs for High Accuracy Correction ......... 404
  7.10.2 Ring with Axial Thickness Variation ....................... 404
  7.10.3 Ring with Forces Acting on Angular Bridges .............. 404
7.11 Future Giant Telescopes and Segment Aspherization .......... 405
  7.11.1 Current Trends in Giant Telescope Concepts ............... 405
  7.11.2 Active Optics Aspherization of Mirror Segments ......... 406
7.12 Vase Form and Middle Surface ..................................... 407
7.13 Vase Form and Saint-Venant’s Principle ....................... 408
References .......................................................... 408
