Asymmetric Cell Division

Bearbeitet von
Alvaro Macieira-Coelho

ISBN 978 3 540 69160 0
Format (B x L): 15,5 x 23,5 cm
Gewicht: 555 g

Weitere Fachgebiete > Chemie, Biowissenschaften, Agrarwissenschaften > Biowissenschaften allgemein > Evolutionsbiologie

DIE FACHBUCHHANDLUNG

Die Online-Fachbuchhandlung beck-shop.de ist spezialisiert auf Fachbücher, insbesondere Recht, Steuern und Wirtschaft. Im Sortiment finden Sie alle Medien (Bücher, Zeitschriften, CDs, eBooks, etc.) aller Verlage. Ergänzt wird das Programm durch Services wie Neuerscheinungsdienst oder Zusammenstellungen von Büchern zu Sonderpreisen. Der Shop führt mehr als 8 Millionen Produkte.
## Contents

**Asymmetric Cell Division in Plant Development**   1
   Renze Heidstra
   1 Introduction ........................................ 1
   2 Polarity and Orientation of Cell Division in Plants  3
   3 Asymmetric Cell Divisions in Plant Development .... 4
   4 Asymmetric Divisions in Embryogenesis ............... 5
     4.1 Division of the Zygote .......................... 6
     4.2 Formation of the Lens Shaped Cell from the  
         Hypophysis ...................................... 9
     4.3 Radial Patterning ................................ 11
   5 Post-embryonic Asymmetric Cell Division ............ 12
     5.1 Radial Patterning: Endodermis/Cortex Formation 13
     5.2 Stem Cell Divisions .............................. 15
     5.3 Lateral Root Initiation ........................... 16
     5.4 Stomata ........................................... 18
     5.5 Pollen Development ............................... 21
   6 Summary ............................................ 23
   References ............................................. 28

**Asymmetric Cell Division – How Flowering Plant Cells Get  
Their Unique Identity**  39
   R.M. Ranganath
   1 Introduction ........................................ 39
   2 Embryo Development .................................. 40
   3 Stem Cells in Flowering Plants ..................... 42
     3.1 Shoot Apical Meristem (SAM) ...................... 43
     3.2 Root Apical Meristem (RAM) ...................... 44
   4 Formation of Lateral Organs ........................ 45
     4.1 Epidermis ......................................... 46
     4.2 Vascular Differentiation ......................... 46
   5 Gametogenesis ....................................... 48
     5.1 Microsporogenesis and Male Gametophyte  
        Development .................................... 48
     5.2 Megasporogenesis and Female Gametophyte  
        Development .................................... 51
   6 Endosperm Development ................................ 52
     6.1 Cereal Endosperm ................................ 52
   7 Future Prospects ..................................... 53
   References ............................................. 54
4 Asymmetric Meiotic Cell Division Leading to the
Formation of Unequal Sized Daughter Cells ............. 108
  4.1 Meiotic Spindle Positioning ............................. 108
    4.1.1 Molecular Mechanisms .............................. 111
  4.2 Cortical Asymmetry ................................... 112
5 Conclusions and Perspectives ............................. 114
References .................................................. 115

Asymmetric Cell Division During Brain Morphogenesis ........ 121
Takaki Miyata
1 Introduction ................................................ 121
  1.1 Applicability of Drosophila Models for
Vertebrate Brain Formation ................................ 121
  1.2 Apical-basal Divisions are Insufficient to Generate
Solely Asymmetric Daughter Cell Output ................... 122
  1.3 Diverse Roles for Vertebrate Numb .................... 124
  1.4 Aims of this Review ................................... 126
2 Cytogenesis During Mammalian Cerebral Cortical
Development ............................................... 126
  2.1 The Neural “Germinal Zone” is a Thick
Pseudostratified Neuroepithelium ........................ 126
  2.2 Complexity of Mammalian Germinal Zone and
Asymmetric Output ......................................... 127
  2.3 Lessons from Time-lapse Lineage-analysis Studies:
Are All Divisions “Asymmetric”? ......................... 127
    2.3.1 Lineage Trees in Low Cell-density
Monolayer Culture ....................................... 127
    2.3.2 Four-cell Clones in Slice Culture ................. 128
    2.3.3 Morphological Asymmetry in
Surface-dividing Cells ................................. 130
3 Links Between Cell Cycle Progression, Nuclear Migration, and
Mitotic Fate Choice in Asymmetric P/P Divisions ............. 131
  3.1 Neuronal-lineage Choice of a Progenitor Cell
Precedes its Departure from the Apical Surface .......... 131
  3.2 Neuronal-lineage Choice is Coordinated with
Cell Cycle Inhibition .................................... 133
  3.3 Is Symmetry Broken During G1 Phase or Earlier? .... 133
4 Reevaluation of the P/N Division by Analogy with the
Asymmetric P/P Division ................................... 135
  4.1 When Does a Surface-born Daughter Cell
Become a Neuron? ........................................ 135
  4.2 A “Moratorium” Model for Asymmetric Daughter-cell
Output from the Apical Surface .......................... 136
5 Perspective ................................................. 137
References .................................................. 138
