4.3 Application to Finance: Portfolio Selection .................. 48
4.4 Application to Sensitivity Analysis and Computation
of the “Greeks” in Finance ................................. 54
4.5 Exercises ............................................... 59

5 White Noise, the Wick Product, and Stochastic
Integration ................................................ 63
5.1 White Noise Probability Space ................................ 63
5.2 The Wiener–Itô Chaos Expansion Revisited ................ 65
5.3 The Wick Product and the Hermite Transform ............. 70
  5.3.1 Some Basic Properties of the Wick Product ......... 72
  5.3.2 Hermite Transform and Characterization
        Theorem for (S)* .................................. 73
  5.3.3 The Spaces G and G* ................................ 76
  5.3.4 The Wick Product in Terms of Iterated Itô Integrals . 78
  5.3.5 Wick Products and Skorohod Integration ............ 79
5.4 Exercises ............................................... 83

6 The Hida–Malliavin Derivative on the Space
Ω = S′(R) ............................................. 85
6.1 A New Definition of the Stochastic Gradient and a Generalized
     Chain Rule ............................................ 85
6.2 Calculus of the Hida–Malliavin Derivative
     and Skorohod Integral ................................ 89
  6.2.1 Wick Product vs. Ordinary Product ............... 89
  6.2.2 Closability of the Hida–Malliavin Derivative .......... 90
  6.2.3 Wick Chain Rule .................................. 91
  6.2.4 Integration by Parts, Duality Formula,
        and Skorohod Isometry ............................. 93
6.3 Conditional Expectation on (S)* ............................ 95
6.4 Conditional Expectation on G* .............................. 98
6.5 A Generalized Clark–Ocone Theorem ..................... 99
6.6 Exercises ............................................... 107

7 The Donsker Delta Function and Applications ............. 109
7.1 Motivation: An Application of the Donsker Delta Function
to Hedging ............................................. 109
7.2 The Donsker Delta Function .............................. 112
7.3 The Multidimensional Case .............................. 120
7.4 Exercises ............................................... 127

8 The Forward Integral and Applications .................... 129
8.1 A Motivating Example .................................. 129
8.2 The Forward Integral .................................. 132
8.3 Itô Formula for Forward Integrals ...................... 135
Contents

8.4 Relation Between the Forward Integral and the Skorohod Integral ........................................ 138
8.5 Itô Formula for Skorohod Integrals ......................................................... 140
8.6 Application to Insider Trading Modeling
   8.6.1 Markets with No Friction ........................................ 142
   8.6.2 Markets with Friction ........................................ 147
8.7 Exercises .......................................................................... 154

Part II The Discontinuous Case: Pure Jump Lévy Processes

9 A Short Introduction to Lévy Processes ......................................................... 159
  9.1 Basics on Lévy Processes ......................................................................... 159
  9.2 The Itô Formula ...................................................................................... 163
  9.3 The Itô Representation Theorem for Pure Jump Lévy Processes .................. 166
  9.4 Application to Finance: Replicability ..................................................... 169
  9.5 Exercises ......................................................................................... 171

10 The Wiener–Itô Chaos Expansion ................................................................. 175
  10.1 Iterated Itô Integrals .............................................................................. 175
  10.2 The Wiener–Itô Chaos Expansion ....................................................... 176
  10.3 Exercises ......................................................................................... 180

11 Skorohod Integrals ..................................................................................... 181
  11.1 The Skorohod Integral ............................................................................ 181
  11.2 The Skorohod Integral as an Extension of the Itô Integral ......................... 182
  11.3 Exercises ......................................................................................... 184

12 The Malliavin Derivative ............................................................................ 185
  12.1 Definition and Basic Properties ............................................................ 185
  12.2 Chain Rules for Malliavin Derivative .................................................... 188
  12.3 Malliavin Derivative and Skorohod Integral .......................................... 190
     12.3.1 Skorohod Integral as Adjoint Operator to the Malliavin Derivative ........ 190
     12.3.2 Integration by Parts and Closability of the Skorohod Integral .......... 190
     12.3.3 Fundamental Theorem of Calculus ............................................. 192
  12.4 The Clark–Ocone Formula ................................................................... 194
  12.5 A Combination of Gaussian and Pure Jump Lévy Noises ........................ 195
  12.6 Application to Minimal Variance Hedging with Partial Information .......... 198
  12.7 Computation of “Greeks” in the Case of Jump Diffusions ....................... 204
     12.7.1 The Barndorff–Nielsen and Shephard Model ................................ 205
     12.7.2 Malliavin Weights for “Greeks” .................................................. 207
  12.8 Exercises ......................................................................................... 211
