Advances in Economics and Econometrics

This is the third of three volumes containing edited versions of papers and commentaries presented at invited symposium sessions of the Eighth World Congress of the Econometric Society, held in Seattle, WA in August 2000. The papers summarize and interpret recent key developments, and they discuss future directions for a wide range of topics in economics and econometrics. The papers cover both theory and applications. Written by leading specialists in their fields, these volumes provide a unique survey of progress in the discipline.

Mathias Dewatripont is Professor of Economics at the Université Libre de Bruxelles where he was the founding Director of the European Centre for Advanced Research in Economics (ECARE). Since 1998, he has been Research Director of the London-based CEPR (Centre for Economic Policy Research) network. In 1998, he received the Francqui Prize, awarded each year to a Belgian scientist below the age of 50.

Lars Peter Hansen is Homer J. Livingston Distinguished Service Professor of Economics at the University of Chicago. He was a co-winner of the Frisch Prize Medal in 1984. He is also a member of the National Academy of Sciences.

Stephen J. Turnovsky is Castor Professor of Economics at the University of Washington and recently served as an Editor of the Journal of Economic Dynamics and Control. He is an Associate Editor and is on the Editorial Board of four other journals in economic theory and international economics.

Professors Dewatripont, Hansen, and Turnovsky are Fellows of the Econometric Society and were Program Co-Chairs of the Eighth World Congress of the Econometric Society, held in Seattle, WA in August 2000.
Advances in Economics and Econometrics

Theory and Applications, Eighth World Congress, Volume III

Edited by

Contents

List of Contributors page ix
Preface xi

1. Contracting Constraints, Credit Markets, and Economic Development
   Abhijit V. Banerjee 1

2. Factor Models in Large Cross Sections of Time Series
   Lucrezia Reichlin 47

3. Macroeconomic Forecasting Using Many Predictors
   Mark W. Watson 87
   “Big Data” Dynamic Factor Models for Macroeconomic Measurement and Forecasting: A Discussion of the Papers by Lucrezia Reichlin and by Mark W. Watson 115
   Francis X. Diebold

4. How Severe Is the Time-Inconsistency Problem in Monetary Policy?
   Stefania Albanesi, V. V. Chari, and Lawrence J. Christiano 123

5. New Perspectives on Monetary Policy, Inflation, and the Business Cycle
   Jordi Galí 151
   Comments on Papers by Stefania Albanesi, V. V. Chari, and Lawrence J. Christiano and by Jordi Galí 198
   Christopher A. Sims

6. Consumption Smoothing and Extended Families
   Orazio P. Attanasio and José-Victor Ríos-Rull 209

7. Computational Methods for Dynamic Equilibria with Heterogeneous Agents
   Kenneth L. Judd, Felix Kubler, and Karl Schmedders 243

Preface

These volumes contain the papers of the invited symposium sessions of the Eighth World Congress of the Econometric Society. The meetings were held at the University of Washington, Seattle, in August 2000; we served as Program Co-Chairs. Volume 1 also contains an invited address, the “Seattle Lecture,” given by Eric Maskin. This address was in addition to other named lectures that are typically published in *Econometrica*. Symposium sessions had discussants, and about half of these wrote up their comments for publication. These remarks are included in the book after the session papers they comment on.

The book chapters explore and interpret recent developments in a variety of areas in economics and econometrics. Although we chose topics and authors to represent the broad interests of members of the Econometric Society, the selected areas were not meant to be exhaustive. We deliberately included some new active areas of research not covered in recent Congresses. For many chapters, we encouraged collaboration among experts in an area. Moreover, some sessions were designed to span the econometrics–theory separation that is sometimes evident in the Econometric Society. We followed the lead of our immediate predecessors, David Kreps and Ken Wallis, by including all of the contributions in a single book edited by the three of us. Because of the number of contributions, we have divided the book into three volumes; the topics are grouped in a manner that seemed appropriate to us.

We believe that the Eighth World Congress of the Econometric Society was very successful, and we hope that these books serve as suitable mementos of that event. We are grateful to the members of our Program Committee for their dedication and advice, and to Scott Parris at Cambridge University Press for his guidance and support during the preparation of these volumes. We also acknowledge support from the officers of the Society – Presidents Robert Lucas, Jean Tirole, Robert Wilson, Elhanan Helpman, and Avinash Dixit – as well as the Treasurer, Robert Gordon, and Secretary, Julie Gordon. Finally, we express our gratitude to the Co-Chairs of the Local Organizing Committee, Jacques Lawarree and Fahad Khalil, for a smoothly run operation.
